It was enjoyable thank you

Some of it was extremely dense, it could benefit from a longer run time.

How useful were the lectures?

No notes here i think they were interesting and on point

Really useful to introduce tools for tackling everyday hard to troubleshoot issues.

How useful were the practical demos?

they were interesing and Luca did then clearl, but i think we miss a bit by not being the ones working.

Very important, I wish the course left room for the attendees to also practice as they go, but this would make the course extremely long.

How would you rate the overall organization of the course?

I think a little tweak in the pacing in order to better split teory and labs, also i know that for performance is stange to emulate systems since that affect performance by it self, but the on the online course labs should be more on the side on the trainees so that we can experiment more.

Very well organized and presented.

How would you rate the trainer?

Luca was great, he was clearly very skilled on the topic, and he encouraged questions

He presented the material with confidence built on experience. Maybe a bit more interaction with the audience (asking directed questions) would create more engagement.

How did the course meet your learning objectives?

For sure, this training gave me a lot of thing to research that i was expecting, and even more like the system profiling section

I learned what I expected to learn, and more.

What part(s) of the course did you like most?

2 responses

The application debugging part was the most interesting to me since it is also what will be most useful

Application and system-wide debugging, profiling, tracing.

What part(s) of the course did you like least?

2 responses

The beggining section was very tedious if im being honest. a lot of teory in big chunks of time

eBPF. It is powerful and I can see the use case, but not in my area.

What reasons prompted you to choose a Bootlin course?

I think the online version of the training needs a bit of retrospective in the labs, a different solution like running a docker or vm so that everyone can do the labs

Further training needs?
