Having a version thats shorter each day but covered the same materials.

well organized and good content for embedded linux beginner

It was really fast going through the material. i dont feel as if it was a complete introductory course.

Definitely a lot to absorb in just 1.5 weeks! But the fact that the material + chat are open for a much longer window does help with that.

How useful were the lectures?

well organized and good content for embedded linux beginner

Just very fast going through the labs and slides

I definitely know way more than I did when I started! The 4 hour lectures are hard to stay present for the entire time but that is just the nature of these things. I think for the window of time given, the instructor did an amazing job with the lectures!

The lecture pace were fast

How useful were the practical demos?

well organized and good content for embedded linux beginner

Lab was good to use but felt like it was vague at times.

The practical demos are very helpful, however there's so many repetition for steps, and some of the lab wording is a bit vague to follow.

How would you rate the overall organization of the course?

It is a lot to cover and very intense. Even if the schedule time only is half day you will need full day to finish labs.

well organized and good content for embedded linux beginner

no comment

How would you rate the trainer?

Good content for embedded linux beginner

its just alot of material in such a short amount of time

What part(s) of the course did you like most?

6 responses

Very useful to do the lab on your own a day after the lecture

the overall knowledge for the Linux system

U-boot, TF-A trust firmware and rootfs

it was good

The labs while quite long were very helpful. I do wish some of the instructions were a bit clearer though, but maybe that's what helped me learn more!

seeing the hardware application on the linux side is pretty cool

What part(s) of the course did you like least?

4 responses

buildroot

just a lot at first

Times when there were no breaks were very rough for me personally.

Flashing the kernel

What reasons prompted you to choose a Bootlin course?

I think this training went as well as it possible could have given time constraints! I am very grateful to have attended and feel I did really improve!

Further training needs?

3 responses

Linux Kernel

Linux Kernel Device Driver Development

The kernel development could be very interesting in the future :)
