I think that not doing the laboratories during the lectures is a mistake. I would prefer less theoretical content and more practical

I think the course did a good job of providing a starting point for Yocto development as well as describing best practices

Very good slides and explanation. The presenter has broad expertise of the topic. The labs could be more interactive but given the time constraint this is a minor complaint and might be different in a life setting.

How useful were the lectures?

What part(s) of the course did you like most?

3 responses

I liked when the instructor shared personal insight and experience and also when we could watch him work through problems when doing the labs

Laboratories

Good structure and clear overview, provided material gives a good knowledge of Yocto and allows to dive deeper on your own.

What part(s) of the course did you like least?

1 response

Labs being more interactive would force more interaction with the material and spark more questions to engage even deeper with the topic.

What reasons prompted you to choose a Bootlin course?

Comments

1 response

Very good mix of contents, knowledgeable presenter and materials provided made me chose over Linux Foundation especially given the pricing difference.

Further training needs?

1 response

Embedded Linux Security
