For my knowledge level the labs have been executed too fast - probably since the course material was pressed into three instead of five days ?

I guess it was our fault to ask for the content to be compressed into three full days. Not having time to do the labs on our own and also to try to digest the amount of content in such a short period of time was very challenging and exhausting.

Increase hands-on time.

How useful were the lectures?

Preferred the interactive labs (with very usefull debugging hints side comments) over the lectures.

Jérémie Dautheribes was a very good teacher and extremely knowledgable. It was a true pleasure to have him as our teacher.

Conduct a comparison among different manufacturers.

How useful were the practical labs?

We had mostly live demo labs - Should be better to practice

Required more time. Would be good to share the lab solutions after each day since the labs have been building on the previous day labs. Once I got stuck it took be at least one day to get the initial labs working but fell behind.

Again, not having time to do the labs on our own was a real drawback. It was interesting to see how Jérémie Dautheribes solved them and see his tips and tricks when you're working with Yocto, but still.

One small suggestion, our company asked for the lab to be completed by Jeremie as a demo rather than us, in order to be "compress" the course. I believe it would be preferable to spend more time on the lab, even if it comes instead of additional material covered.

Pratical lab material should have all the steps done by instructor during the "live" pratical lab

How would you rate the overall organization of the course?

Room could have been larger for the amount of people. Good amount of breaks and also the air quality was OK.

Very good

How would you rate the trainer?

Thank, this was informative and fun.

Jérémie Dautheribes was truly excellent!

Special mention to our incredible trainer Jeremie. This course is very technical, but Jeremie managed to deliver it in a digestible and playful way. He was very conscientious and patient despite the very long duration of the training and our many questions.

Jérémie did a great training, perfect language with the right schedule and speed

What part(s) of the course did you like most?

7 responses

Yocto SDK and devtools

Everything was very professional from course material to presentation.

The discussions with the trainer, the answers that he provided to my questions.

The labs.

The labs / Demos

All topics perfectly covered and alternated with pratical labs

Hands ON

What part(s) of the course did you like least?

3 responses

The quiz :-). I always struggle with multiple choice tests with more than one correct answer to select.

Pratical labs only because a step by step should be better describing exactly which folder/file has to be created or modified, with the right content, set and commands that must be written/modified. The solutions material must be already included in lab material because in my case, only with Linux command knowledge, was better to do and re-do some labs

NO

What reasons prompted you to choose a Bootlin course?

Ideally, this course would be spread over several weeks, with one chapter covered each week, allowing participants enough time to absorb the information and work through the exercises. Unfortunately, reality doesn't really allow for this kind of approach. Maybe for the online session.

VeryGood
