**What part(s) of the course did you like most?**

File system and real time (the part I knew less than the others) - part about the NAND flash file system (directly applicable in my job) - debugging tools for embedded systems - globally, the presentation of the generic structure of an ARM Linux system was very helpfull to me - real time Linux (completely new to me) The descriptions of the differents tools and the kind of "How to" associated. (u-boot, busybox, buildroot, jffs2, squash, ...) All parts Labs because technical challenges is what I prefer...

**What part(s) of the course did you like least?**

- Toolchain generation - the introduction part was maybe a little bit too long i don't known, all topics interested me ... Nether ? travel ?

**Comments**

- Multimedia part: QT, sound... - Linux system programming I am definitely interested in another session going deeper into the kernel; I will have a look at the slides of your Linux kernel and driver development training. - Optimization (software size / performance) Ubuntu Administration Qt Sure... but not yet... I need to practise first!
