Helpful about Linux, cause I'm new with it. I understand more open source now, and config files, etc... My daily job isn't about Android. But I'm confident I can start working on Android projects now.

Excellent Android system course. Gives a good global (yet precise) view of the system components and their interactions.

**What part(s) of the course did you like most?**

compilation of kernel      Theoretical and oral explanations.      How to compile a Kernel, downloaded from the official website. How to configure this build.

**What part(s) of the course did you like least?**

May be the long session of compiling with slow computers.      I understand that it is easier to do a lab with a common device but I personally don't like to configure Beagle board because I want to try on a real phone. There is too many different files to configure. Furthermore, I don't like so much debugging in the Kernel^^. But it is personal.
