### Comments and suggestions

In some cases there were two (or more) possible ways (to do something) presented in the material but actually on one of them was the correct way. This was a little bit confusing. Of course it is good to know other ways as well but may be it could be somehow told more clearly. Pictures (block diagrams of the lab environment etc.) would be useful.

#### Comments and suggestions

Not too easy! Sometimes a little bit challenging but after all very educating.

There was some gap between the high-level presentation

of the theory and the work with low-level details in the exercises.

5 - Too difficult	1	9%

Comments and suggestions

some labs did not have very clear instructions and you had do some research which took quite a long time. see above Hard to remember command syntaxes what to use. Hard to remember the root purpose of labs what to do. More step by step information needed. Some chapters of the lab book were very detailed (good), some gave only an overview of what to do (not so good). There were a few printing mistakes or omissions that blocked the progress. More instructions is needed in some of the labs. Especially the labs with the file systems needed quite a lot help from instructor.

Was enough time dedicated to practical labs?

sometimes it took quite long to complete the labs and the days were pretty long. But it is definetely worth it. The file systems labs took longer than was dedicated.
