Nice buildup. May be shorten the labs a little bit and guide them closely step by step to keep every one at the same progress.

be more consistent: ACME was used in many examples, but not in all, and first I thought ACME was some linux part (as sound, net, video..) instead of a driver-hardware name.

The labs suggest a certain knowledge about linux. When this knowledge is poor, it is sometimes not easy to stay on course. So a more step by step solution should be helpful in this case.

A smooth setup of Ubuntu was a little problem. The need to setup Ubuntu native (not VMWARE) was not asked directly (may be an internal communication problem at our side). my laptop is the best ;-) nice development board to test on

What part(s) of the course did you like most?

The lectures. about platform device explaining framework-driver-bus infrastructure

What part(s) of the course did you like least?

The labs, maybe more guided step by step to avoid waste of time searching. kernel sources and kernel compilation: learned in the embedded linux course (but still nice because another point of view)
