Too cold Internet access too slow for initial setup. While we do have an internal mirror it does not have the correct versions used for the labs. It we be better to provide the information required for us to setup an appropriate local mirror in advance. Since the training location was our satellite site we should setup a local server to avoid bandwidth limitation between the sites.

Android application a b c Install on an android board the android distribution and another one (with a classical libc), like done by Ubuntu. I'm interested in an extra session covering: * how to customize the build environment for a new board (ex: local_manifest.xml for repo)? * how to submit patches on AOSP? * Tips or processes to maintain my own branch of Android platform android app and not android system ... Not at the moment
