No objective was defined and I didn't expect nothing special, but as a newbie in Android development, I appreciate to learn I would have preferred to spend less time on linux/kernel aspects and a little more on android upper layers. Spend less time on basics like initial repo, or maybe provide inputs for everyone to come with the synced environment and compiled a first time? Please make sure every couple of trainees have a Linux PC with them. We suffered from using a remote access to a Linux station.

How was the duration of the course?

1 - Too short.	0	0%

4	4	40%
5 - Definitely too long.	0	0%

Comments and suggestions

Good ! Compilation time and repo sync make training longer Too slow the first day, too fast the last 2 days As training gives time to complete Labs (good point), some margin should be provided in case anything get broken, in order to have time to complete every steps. Some long operations can be done while look at the slides, like wget, git clone, repo, etc...

Some lost with the 2 last labs Provide a correction for all labs and allow some time to understand the issues and solution for each lab maybe ask at the beginning / clarify what the focus would be : more on embedded linux / lower level or android & higher layers

Comments and expectations

maybe at the beginning of the session, clarify with participants what they would like to spend more time on : android or embedded linux 1 pc for 1 person, else it is not usable
