I think this training could be 1 day longer. Lectures and labs are well balanced. Not enough time to train with the last lab and to apprehend all the concepts of the lecture about Android framework and application. One more day might be helpful

Would be interesting to add reminder of the whole system at the beginning of each chapter so that we better get the global picture and better understand the role of each component. Also add examples of android apps (high level and low level apps) and roughly show where the system should be modified to develop such apps. The lecture document is quite useful: during the training and after the training

Would be great to add a short introduction before each lab more clearly indicating the goals and how it fits in the overall system and final application we want to build. Also prepare backup files (source code, compilation result ...) pre-installed on each PC so that we can use them and avoid lose time in case of technical problem (wifi, corrupted files etc ...) as far as time consuming tasks are concerned (fetch, build ...) very helpfull, but lot of download time and build time. I understand android is by nature big and long to build, but maybe there are ways to improve. Labs show the step ...
