Maybe a bit more precision on how sysfs interact with the board I/O as the main purpose of this devices are to interact with others. a mon sens, c'est un tres bon training pour comprendre l'interet et comment mettre en place un systeme embarqué. Au niveau de mon objectif, cette formation est une bonne introductions. A mon niveau une formation kernel est necessaire. Taper moins de commande et faire plus de manipulation avec le hardware : Application sur la cible

C'est mieux avec la formation! Je pense que le support sans instructeur soit difficile à suivre. Par contre c'est un support bien fait pour revenir sur la formation plus tard.

May be try to continue all the Labs with the development board. Je n'aurais pas compris les concepts sans les TP les labs sont bon car montre les difficulté que l'on peut rencontrer lors de la construction d'un systeme embarqué. TROP de ligne de commande à taper, plus de TP sur la cible si possible.

It has been recommended to me and i'll spread the word too. Specialement pour les personnes qui veulent decouvrir l'interet des systemes embarqués linux

What part(s) of the course did you like most?

La partie builroot est tres intéressante. I liked most of the parts, especially the steps which allow to have a fully running system. The licensing also, the advices about the design were very very useful. Bootloader & Kernel Toolchain compilation, U-boot, Kernel manipulation (flashing, nfs root ...) and Buildroot 101 Interaction avec la cible et outils automatique

What part(s) of the course did you like least?

La gestion de conf. Compilation: difficile à comprendre pour quelqu'un qui n'utilise ça normalement. Peut-être voir les outils de compilation automatique avant la compilation manuelle aiderait à comprendre mieux cette partie? The graphical library compilation but it's the point, right ?

oui par une session plus dense sur le temps réel Probably the session with developping with Linux Kernel. Pas pour l'instant, peut-être je serais intéressé par linux kernel and drivers The one that covers more deeply the Linux Kernel. un approfondissement dans le kernel/driver me serait très utile. Manipulation sur la cible, temps de démarrage sur la cible, ...
