Start at 9AM to finish at 6PM is too long. With only 1 hour of break for launch. Sometime, break for 15 minutes but finally it's nearly 8 hours a day of work. I think 7 hours a day is better.

Parfois, le contenu n'est pas suffisamment "guidant". Ceci dit cela nous force à chercher. It's about 10% difficult and 90% easy ratio, so not a problem.

Some labs were difficult but the others were okay.

Was enough time dedicated to practical labs?

Some additional information to realise practical labs "Filesystems - Flash file systems" could give more time for the rest of the training.

Room (a little small) and connection (some dl take too much time) were provided by our society, not the instructor. All provided by the instructor was very good! Equipment was very good. Too much PC, wiring, in such a small room (SII problem, not FreeElectrons). A demo with a monitor plugged on the board would have been appreciate.

How do you rate the training equipment (mainly computers)?

Maybe a test of new kernel should have been done against U-boot... ECC problem when flashing jffs2 partitions from U-boot! We have lost nearly half of day searching what was the issue...

I am not currently working on a project which used embedded Linux but I hope to work one day on one and I think this course will be very usefull for me.

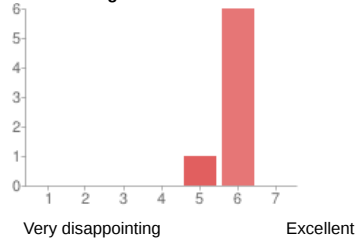

What part(s) of the course did you like most?

The lab parts are very insteresting and usefull to understand and practice what is explained during the lecture and also to learn how to resolve some issues. The instructor knowledge is also a very good point. Integration of Kernel in the card, Building from scratch a system using BuildRoot.

What part(s) of the course did you like least?

When I was not able to flash jifs2 partitions image on NAND. That was disappointing. :(
