Comments and suggestions

Some of the knowledges I learn this week will be very useful to me. In the lecture I would find it useful to have some kind of summary at the end of each chapter, something like "things to be remembered". Direct Implication on a Linux embedded STB project.

What part(s) of the course did you like most?

I was quite interested in the kernel and in buildroot. The first 3 days, with the kernel generation, Nand flashing and memory organization were extremely instructive.

What part(s) of the course did you like least?

Tools for embedded linux are interesting but would be more when going deeper in them.
