

Evaluation report notes

One participant reported the absence of US keyboards. This was an isolated mistake on our side, and actions have been taken to avoid such an issue in future sessions.

Our apologies for the inconvenience. We wanted to highlight that Free Electrons is supposed to supply US keyboards in sessions taught in English.

Paper + electronic version is definitively appreciated. I could take notes on the paper version, and copy-paste from the electronic one. Keep it !

More labs
Try, if possible, to add more optional tasks ("Going further" type), for people who finish a given lab early.

Very good for french people. For others, the AZERTY layout can be quite a struggle ; maybe the session equipment should include some USB QWERTY keyboards at disposition, or the convocation could mention that you can bring your own if you want to be comfortable.

What part(s) of the course did you like most?

- BSP Some additional explanation on CPU options (fine tuning) and architecture would have been nice, even if maybe a bit off topic (how to get the toolchain right for a platform)
- The labs.
- Custom recipes, bsp, images.
- Writing BSP layers even if I would have this part more detailed.
- The goal of the labs (to play nInvaders on the nunchuck) brought some fun to the session, good idea!

What part(s) of the course did you like least?

- Eclipse part.

- Create a BSP layer for dedicated processor.
- More advanced labs.
- see below...
- No, I feel that any more topics that I would want to know about would be very specific to my own dev needs.
