I think it is a usefull course as a first contact with Linux kernel and driver development, but I miss a deeper view in various things, such as dts, different driver types,interruptions handling.

What part(s) of the course did you like most?
Very dynamic. Very intense.

The description of the different subsystems in Linux, related to the different drivers supported by the kernel. The debugfs subsystem

Driver model and kernel debugging

What part(s) of the course did you like least?

Comments

Having recently met the different I/O subsystems in Linux (in this course ;)), I think it would be very valuable to have a practical example of each subsystem (as the one we've had with I2C in the course) supported by the Linux kernel. These examples would be very valuable in order to understand each subsystem, without the hard work of analyzing the state of each driver in the Linux kernel.
