Great course, deep diving into the Yocto philosophy surrounded by concrete examples with labs

I came to the course with a poor knowledge of Yocto and leave it with some good basics knowledge and practices. I would have appreciated a more dedicated point on debug tips and tricks when something goes wrong or informations on typical mistakes.

How was the duration of the course?

Comments and suggestions

Declare end of lab then proceed to correction

I would have appreciated more (optional) labs, as when already a bit familiar with Yocto they are quickly done.

Real beginner of Yocto, one day more could have been good to practice even more.

The course starts with some generalities which could be avoided. This is the case because I already have some strong linux development knowledge?

Insert a summary page showing the slides plan, and also a reference to quickly find the right chapter.

Documents are globally good and quality is present. Information are also present. From my point of view I would have appreciated a global picture of the workflow of Yocto.

It's appreciable to get info from someone who uses Yocto on a day to day basis

The instructor is competent and answers all the questions of specific projects.

The instructor is clearly an advanced user.

Good explaining capability.

This is an entire part of the course and the support for labs was really good. I appreciated info shared with the group even if only one team got it.

The instructor is involved and helped us to better understand the behavior of the board, and the topic.

Very useful: 5 **7** 63.6%

Comments and suggestions

Don't hesitate to add more, try differentiating them (adding harder labs, so people going fast can try other things)

Labs are necessary to understand what we are studying.

Miss some traps to investigate.
