I have started the course with some self-educated basics and a lot of points are much more clearer after the course. Moreover the course increases the interest in the topic

Maybe put some slides with Eclipse Buildroot Plugin

Maybe there could be more about linux init systems. I think it's gonna be very interesting for embedded linux developers in terms of boot time.

How was the duration of the course?

Comments and suggestions

Very interesting topic and a very pleasant presentation style. Most of the practical labs could be done in time.

Embedded Linux is a very wide topic (i don't have to say that to you :D) So one week was at least enough for an overview

The document of the practical labs are good because of the explanations in some chapters. The presentation sheets are good, but in some points (file system topic (ubi, etc.)) they could be more specific

some were easy some were challenging.

Sometimes not specific explained, but that is exactly what i liked. It demands to think for yourself and do some trial and error, which is also part of developing

Nearly the only thing I didn't like about the training were the slides. They're too full of text. Of course it is nice to have them to look things up later, or during the labs. But for the presentation I would suggest that you use less bullet points and less full sentences. If you change that, maybe the "long sentence"-version of the slides could remain available at the website (as I mentioned, to be able to look things up later).
