All areas of interest seem to be covered possible for duration of the course. What would be nice is to cover arm64 development board instead of beagle bone black which is a bit old.

i have expected more interactive format, but it was OK, allowed for experimentation after the session

How was the duration of the course?

Could be a little bit longer for more descriptions of other subsystems/drivers framework

4 hours a day with one day break makes sense. This way everyone willing has opportunity to experiment with their own HW.

How useful were the training materials?

I like that both slides and lab exercises are detailed. Keep it like that!

How knowledgeable was the instructor?

OK for non native speaker. Understandable.

presents the content clearly and answers the questions

How useful were the practical demos?

14 responses

Comments and suggestions

3 responses

For me best way of learning

Maybe it would make sense to use some more common peripheral device for demo, instead of game controller. Like e.g.: temperature i2s sensor.

would work much better if the participants have the same HW and do the exercises in parallel

Was enough time dedicated to practical demos?

No responses yet for this question.

How well was the course organized (program, registration, schedule...)?

14 responses

Comments and suggestions

1 response

You could let know to prepare PC with Linux

How much did you learn?

14 responses

Comments and suggestions

1 response

I didn't have option to code/experiment on my own. But I expect to re-do the course off-line and learn much more from slides/labs.

How useful should this course be in your daily job?

14 responses

I'm not responsible for this kind of decision.

From my point of view there was not enough information before the training started about the preparation - like VirtualBox with linux installed, cables etc - would be very usefull to provide such data before. As the material is very complex there should be more time for demos and exercrcises.

Training was well prepared and organized but one important thing was missing: the complete bench setup which allows us to follow teacher's guides and implement the code by ourselves. Most of us uses Windows and we had to organize another computer with linux on our own. It would be ok to prepare some ready virtual machine or even image with complete setup.
