As a beginner, struggled with the pace at times but got all the basic ideas.

Would have liked an opportunity to replicate these myself but didn't have the time or the hardware so it was good to see them done by the trainer.

The lab guides are good, easy to follow

How would you rate the overall organization of the course?

To me the course could be structured a bit differently time-wise: Having sessions of 1.5 hours has been a bit too long to me to really stay focused. I would have preferred sessions of 1 hour with short breaks in between.

How would you rate the trainer?

Demonstrably had an incredibly deep knowledge of the subject.

The knowledge and commitment is very appreciated

You really feel that Thomas is passionate about what he is teaching!

### What part(s) of the course did you like most?

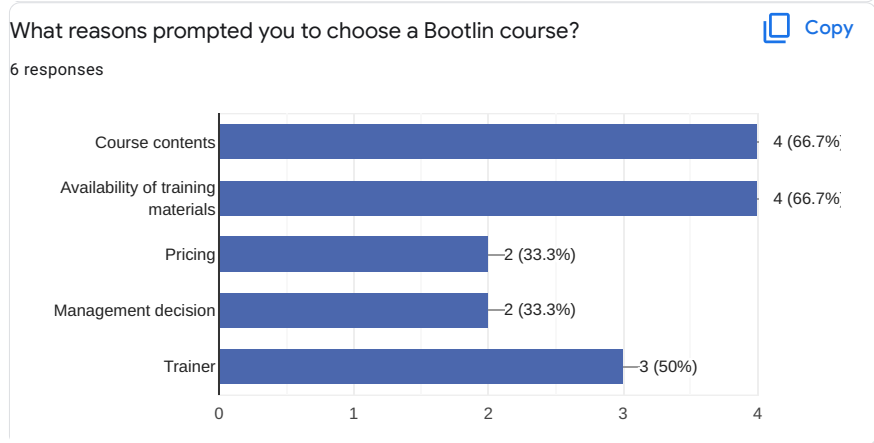

5 responses

- Picked up lots of useful tips (both buildroot and wider Linux) from the labs
- All of it, and very glad the sharing of Buildroot internals.
- demo lab is the most practical and helpful
- Being able to ask questions adds so much to the learning experience in comparison to just working through the slides!
- Well structured. Practical labs helped understand concepts better. Trainer answered all questions from participants and often sensed if something was not clear

### What part(s) of the course did you like least?

1 response

- Kernel configuration is the most confusing part. Overall, time is limited for the intensive content to go through.

### Comments

2 responses

- This course is helpful for my starting work with buildroot.
- Innovative model of releasing training materials before the session. This helped to understand the course better.

Further training needs?

2 responses

Yocto Project and OpenEmbedded system development

Embeded Linux.
