My personal opinion: The Linux commands used during Lab sessions, should also be added/Keep updated in LInux_commands.pdf (from bootlin site), so that i(who is new to Linux)can aware of the commands prior to the training. Many new commands introduced during training, which made it difficult for me to understand the command usage during training.

How useful were the lectures?

Being someone who's fairly new in embedded Linux world, this training was spot on!

How useful were the practical demos?

Due to the reason i don't have the mentioned STM HW with me, its difficult for me to practice some demos on my side.

How would you rate the overall organization of the course?

Sessions should be shorter, but stretched over more days. There's a lot of materials to go through, so sitting for 4 hours can be quite overwhelming.

How would you rate the trainer?

Truly an expert, if some questions don't get resolved on that lecture, trainer is ready on the next one to explain.

How did the course meet your learning objectives?

one suggestion about training: If possible, May be plan alternatives platform for the training (from jst). Because, whenever i switch on Video, the call consuming too much bandwidth suchaway the trainer/training content screen quality going verybad (eventhough my internet connection speed/bandwidth is veryhigh), So i always need to switch off my Video.

Further training needs?
