Overall it was an interesting course. I think bigger or more frequent breaks would be really good. It feels almost like 4 hours in a row, and with this amount of information and looking at code it is getting really challenging to keep up. Also, I believe that the labs are essential and that they play the most significant role of really understanding the concepts. In that regard, we should have more time between the lectures to manage and finish the labs, which they can take quite some time.

How useful were the lectures?

Lectures are very useful, but the comments above apply here as well. More breaks would help following the lectures until the end. Additionally, it would be really helpful to have a small explanation of every variable/cmd used in the slides. A lot of them are covered, but some of them are only explained during the lectures.

Really useful, but it would be better to have some time beforehand, so that we try first to reproduce the labs by ourselves.

More labs covering as many concepts as possible would be nice

The trainer was really good. Only one remark. In the beginning the accent was a bit challenging to understand everything, but as the lectures went on, I personally got used to it and it wasn't a big issue any more.

How did the course meet your learning objectives?

What part(s) of the course did you like most?

2 responses

Common practices, best practices, the trainer, useful tips

The labs

What part(s) of the course did you like least?

2 responses

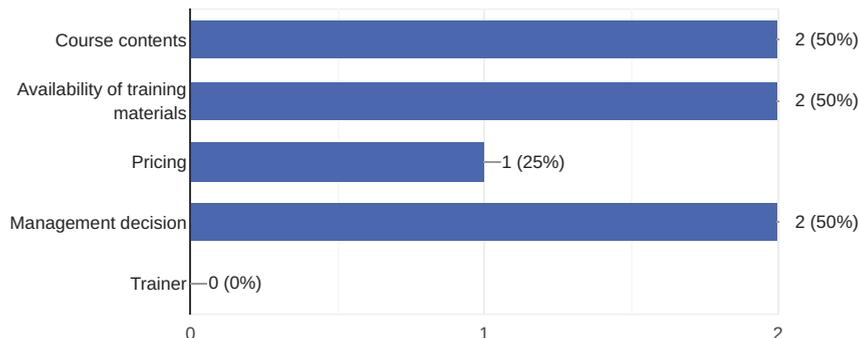

I prefer self paced learning similar to most subscription based course providers. Pre-recorded lectures and labs done in my own time with follow up q&a sessions over video or chat would be much better. This course was a bit intense.

The super advanced topics. Although, if we had more time to first work on the labs and deeply understand the concepts, these topics would fine as well.

What reasons prompted you to choose a Bootlin course?
