Great training with really useful materials and examples

Much more insightful than the Yocto manual or most of the on-line materials.

How useful were the lectures?

1 response

Very useful but not everything that was in the QUIZ or what was said is reflected in the slides (e.g. stampfiles).

How useful were the practical demos?

One practical demo was missing: setting up a gdbserver. Everything else was very interesting.

How would you rate the overall organization of the course?

Perfectly prepared, made some checks and exercises based on trainees suggestions answered all questions

I was impressed by the deep knowledge on the subject of the instructor.

How did the course meet your learning objectives?

I'm still confused and not sure about terminology. It's not clear for me what are the differences between image, distro and layer. I'm missing some abstraction here. A brief summary of best practices and what to avoid would be extremely helpful.

What part(s) of the course did you like most?

3 responses

All the content

I liked very much how logically it was divided and how logical the order of the presentation was (not exactly the part of the course, rather its aspect). It really helps to understand better build system as a whole.

gdb and debugging recipes.

## What part(s) of the course did you like least?

2 responses

My network/PC issues ;) (but nothing you can do about it).
I would prefer to have a conference and a chat in one place - but it's not a big deal.

Machine-related configuration.

What reasons prompted you to choose a Bootlin course?　　　📋 Copy

Further training needs?

2 responses

Linux embedded development

Training in writing drivers was mentioned a few times during the training, I think it would be nice to try it.
