In my opinion, every 4 hours of training need at least 16 hours of practice so I think it could run at the 4 weeks. However, the teacher had a broad knowledge of Linux.

I would suggest that the last session, which is optional and depends on the number of questions of the attendants, to be mandatory and not optional. But, instead of being on friday after the 4 days of the course, make it one week later, when the attendants have time to go through the notes, the labs, and have collected some meaningful questions

### How would you rate the trainer?

Super

It's great to have a trainer that is actually involved in the project that is the course about. That gives a lot of confidence to the attendant.

### How did the course meet your learning objectives?

maybe gather some feedback before starting the course from participants over their specific needs, so the trainer can prepare some examples or enhance the examples to be more close to the participants specific platforms

### What part(s) of the course did you like most?

4 responses

The part regarding how to write recipes and debugging of recipes was interesting

just all of it

Real world examples. The structure also fits well for an overall training on yocto.

All the concepts included practical examples. the instructor also demonstrated the possible errors that may bump into it.

### What part(s) of the course did you like least?

3 responses

=

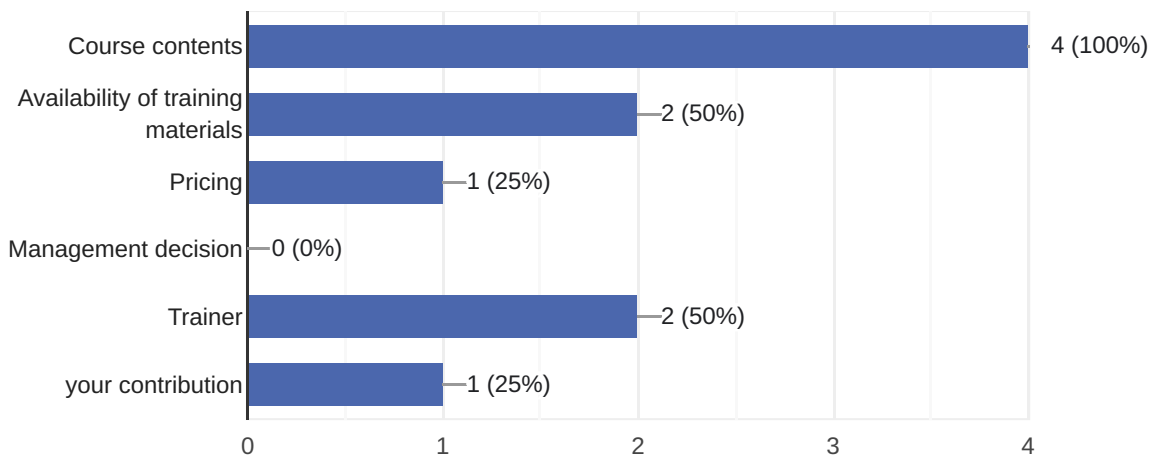

Labs are to fast to follow.

we didn't have time to practice the practical labs.

### What reasons prompted you to choose a Bootlin course?
