Some more examples

I think its

It should be useful to specify which basic knoledge is mandatory to attend the course in the better way

a list of prerequisites should be provided in order to eventually fill the gap before start the course
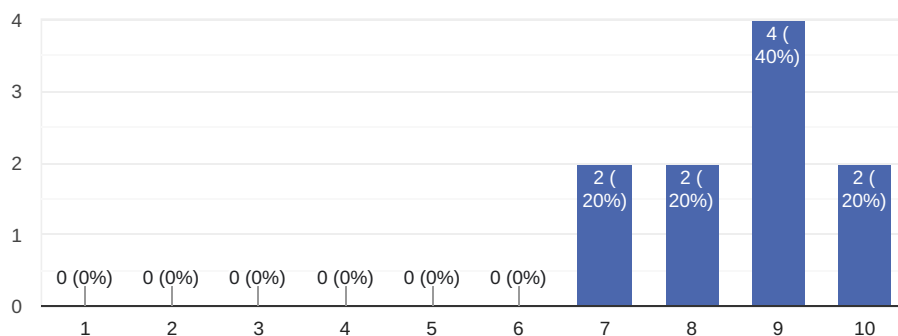

Very interesting course on an important topic.

I think that practical exercises were not enough

How useful were the lectures?

I'd not so much time to read in these days but the contents seems interesting

The lectures were great!

How useful were the practical demos?   ⧉ Copy

a couple of exercises more should be fine

Maybe some item requires more time to elaborate the concepts

will be usefull to have a more interactive labs. Also maybe should be better do it slower
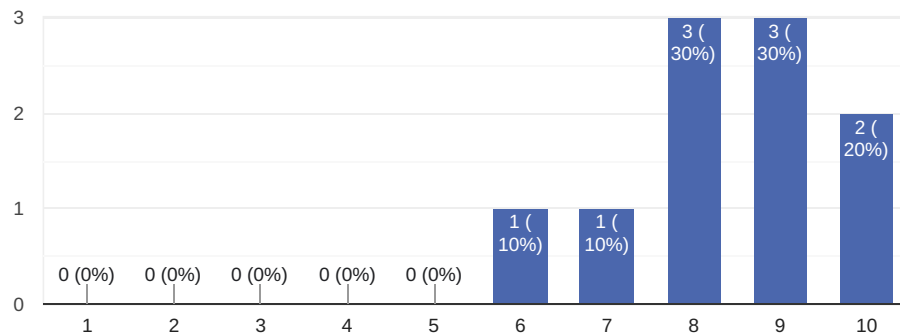

I had some trouble keeping up with the labs because of the initial Yocto build, which was extremely long and resource-intensive. I would suggest warning attendees that they might have to start the lab 1 build before the course begins if they want to keep up.

Few practical exercises

## How would you rate the overall organization of the course?   ⧉ Copy

clear explanations and very available person

Luca was very professional and open to questions. He also had a good pace.

The trainer was great!

How did the course meet your learning objectives?

I felt like I acquired a good grasp of the basics of Yocto.

I received more information that I expected

What part(s) of the course did you like most?

5 responses

practical/lab examples

layer presentation because I'm going to use it ina an heavy way later in my project

The practical part in general

Writing recipes. It felt like the most important and useful part of the course.

The labs

What part(s) of the course did you like least?

3 responses

Devtool. This felt like a bonus topic that was a bit too much to take in at this stage of the course.
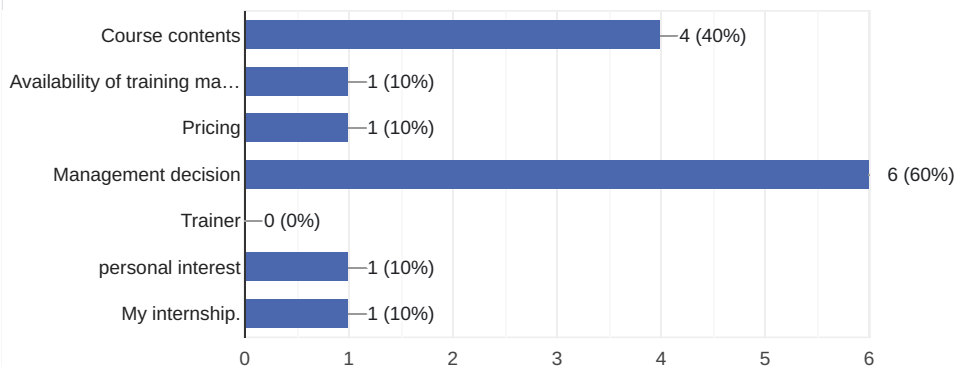

Devtool

The yocto project with SDK was very fast.

What reasons prompted you to choose a Bootlin course?

☐ Copy

I liked discovering Yocto, even if the labs were hard to keep up with due to the initial build.

The course was really interesting and high level knowledge

Further training needs?

3 responses

linux embedded

I feel like designing a generic Linux system integration course (not Buildroot or Yocto-specific) could be an interesting idea. Something that explains things like the typical problems and pitfalls of Linux system integration and the characteristics of some important software blocks.
