I think that this course is pretty good despite the topic is very tough.

Excellent. The material to be covered was huge.

Good overview of the Yocto Project and OpenEmbedded, covering the main aspects necessary to get started on a project.

It has been a great course! The overall speed when presenting new topics was a little bit too high and I've got the opportunity to really understand some of the topics only the day afterwards while performing by myself the labs

How useful were the lectures?

It would be nice to have a reference document on top of the slides describing more in detail the topics.

Very thankful to Alexandre Belloni for taking extreme efforts in explaining Yocto in a simple and understandable manner. Now I have a good base on Yocto which I can build on.

How useful were the practical demos?

I had no prior knowledge in Yocto before attending the course. Hence the demos on the 4th and 5th day were very fast. I could understand what was going on in the demo the first three days.

Very helpful to get the confidence you can do all this by yourself

I would like to have a day between each lesson to be able to review the pratical demos

Labs are not reproducible without already knowing how to do the lab

## How would you rate the overall organization of the course?

I would definitely change the meeting system, I experienced many connection losses.

How would you rate the trainer?

Great and broad experience using the Yocto Project, contributing to it and following its latest developments. Thanks Alex!

Alexandre is a great trainer

How did the course meet your learning objectives?

What part(s) of the course did you like most?

5 responses

Patching nInvaders

The devtool part, because it will help me maintain some recipes

Practical labs and examples

I enjoyed everytime the instructor spawned a shell to showcase anything. I think it's a good approach to approach the course material from a practical perspective.
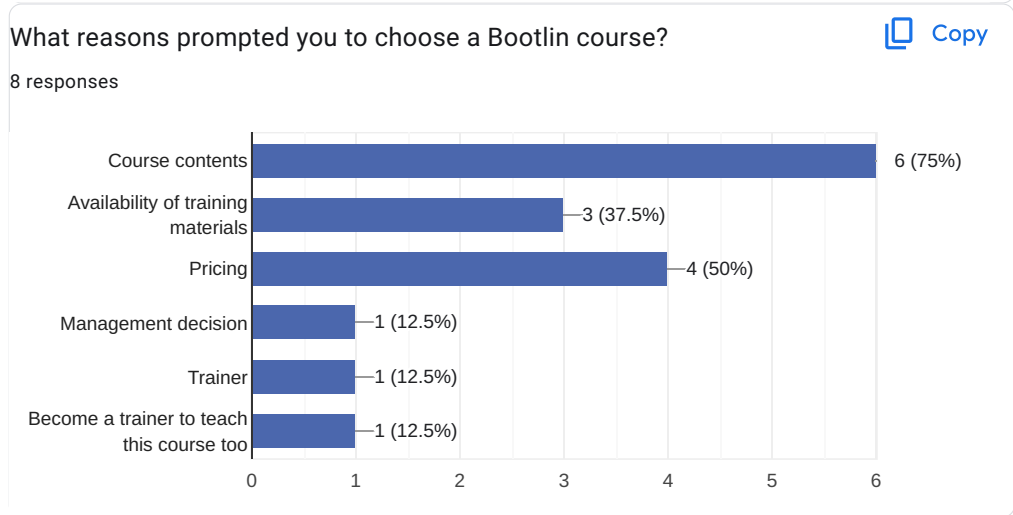

demos

What part(s) of the course did you like least?

3 responses

The last 2 days of the course were pretty fast. However, I think the topics covered were huge and all of them could not be covered in 5 days. This was the reason that the sessions went fast the last 2 days..

None. Everything looked useful

Advance part

What reasons prompted you to choose a Bootlin course?   Copy

A suggestion to improve. Maybe the less used features of Yocto can be omitted in the course to give more time for the important ones.

Further training needs?

1 response

Embedded Linux
