I would have prefered to have more practice during the course. Maybe like 30-45 min of slides and then maybe 15-20min of practice.

Classes were great and went through the entire audio stack from bottom to top.

## How useful were the lectures?

If possible, I would be very interested in building and running the demos on hardware (so each participant builds and runs practical labs as part of the course as well). This way I will have more of an understanding of building and running a few ALSA examples on my own hardware.

How would you rate the overall organization of the course?   Copy

If possible, I think an additional day might be needed to more fully cover GStreamer.

How would you rate the trainer?　　　　　　　　　　　　　📋 Copy

What part(s) of the course did you like most?

2 responses

I liked all parts of the course.

kernel and debugging part

## What part(s) of the course did you like least?

2 responses

The training hours were a bit short and we we weren't able to go through gstreamer.

user space part

What reasons prompted you to choose a Bootlin course?   Copy

J'ai trouvé top de faire beaucoup d'aller-retour entre les slides et elixir pour voir des exemples concrets. J'ai trouvé que la fin sur pipewire était un peu trop dense

I really enjoyed the course overall, and definitely will consider other Bootlin courses in the future. Thank you again!

Further training needs?

1 response

I am very interested in additional training in Embedded Linux for Audio and DSP
