generally speaking topics in embedded can be tough because many knowledge dependencies are needed and its hard to come up with a learning path that makes sense but bootlin seems to do that well.

## How useful were the lectures?

the lectures were mostly very useful and definitely a step up from just reading the freely available slides. some topics are a bit too dense and its hard to make sense of things when we havent yet encountered those problems ourselves, but thats theres not help for that other than digging into the topics.

### How useful were the practical demos?

they were useful. they could maybe be ran in a slower pace, if possible.

### How would you rate the overall organization of the course?

7 responses

### Comments and suggestions

im really satisfied with the materials, the communication from bootlin, the dedicated pages that were setup with all the info and links to slides. the overall organization is really good.

The agenda was quite tight and in the last session we were running against time to finish whitin the period. I mean, if we had had more doubts during classes, it would have been hard to finish the course in time.

### How would you rate the trainer?

our trainer had great communication skills and his knowledge and willingness to understand and answer all of our questions, even the ones who might have been a little out of scope, was definetely a great added value.

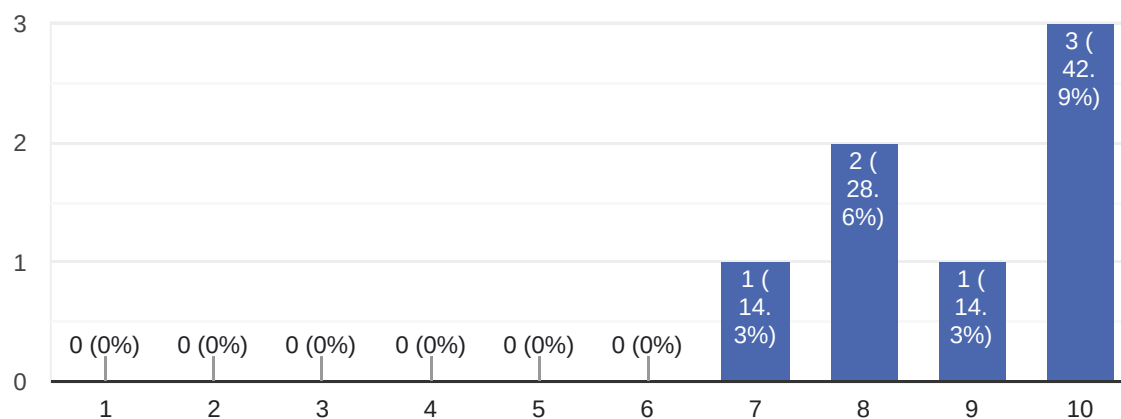

Thomas was one of the most qualified trainers I ever met, with many years and experience and wide knowledge of different tools.

### How did the course meet your learning objectives?

### Comments and suggestions

2 responses

yes, overall the course gave me the opportunity to understand the topic in a structured manner which was what i was expecting from it. there are finer details that i know ill better grasp when i need to actually go through them at work but the course has left me with a much better general understanding of the topic.

Some specific contents were too deep down into some aspects of buildroot that we are possibly far from.

### What part(s) of the course did you like most?

4 responses

The lab

the lectures

The course and materials were well organized and easy to follow

I really liked learning more about make language and how it is implemented in the context of Buildroot. In addition, it was very important to know what we are truly capable of doing with such tool, such as different configurations and project

### What part(s) of the course did you like least?

4 responses

Nothing

i liked the labs but at times i wished they had been ran in a slower pace, which i understand is hard to do when theres so much to cover.

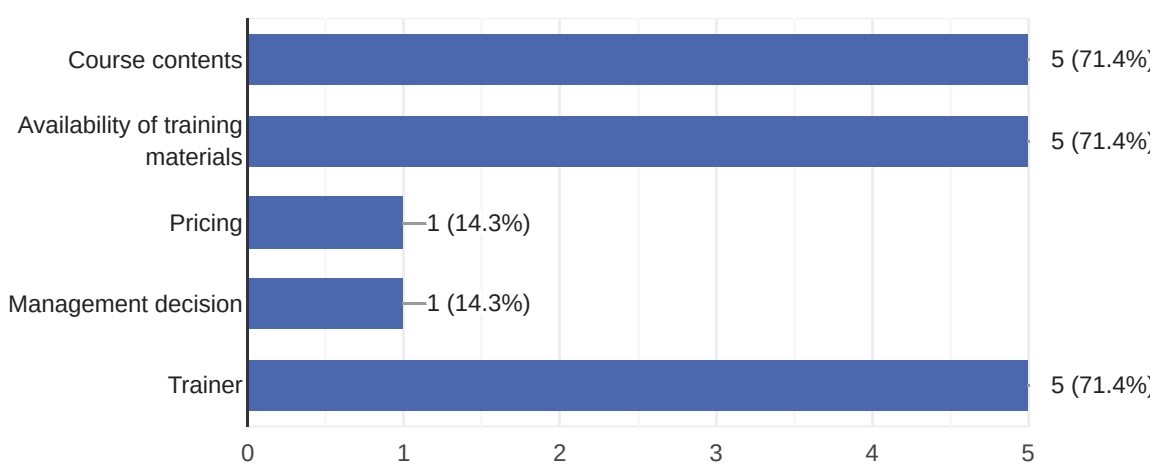

The lack of practical and interactable applications during the course

As I already mentioned, the parts when the topic were to specific

### What reasons prompted you to choose a Bootlin course?

overall im satisfied with this course from bootlin and i intend to attend other courses. i acknowledge how hard it must be to put together a course like this, specially when the audience is diverse and the course has to speak to everyone. i think with that in mind bootlin has done a great job and i would definetely recommend bootling training.

I'd like to thank Bootlin team for all the support and attention during the course and we are already making use of the knowledge acquired.

### Further training needs?

2 responses

embedded, drivers, ASOC

Driver and device tree developing for embedded linux.
