I did learn new things but some of the things explained cannot be used in our project as-is but yes the concept was good to understand.

Great course, very happy with the content and the presentation.

Very good content and presentation

Great course given by very knowledgeable instructor. Combination between labs and lectures is a great way of learning.

Very well structured curricula which has the clear direction and intent and stimulates to keep focused.

## How useful were the lectures?

## Comments and suggestions

1 response

Interested in building custom linux images, this course helped me understand all the building block and how they come together.

## How useful were the practical demos?

13 responses

## Comments and suggestions

4 responses

I would have preferred to have time to do the practical training myself during the course simultaneously with the trainer

The practical demos are nicely structured.

I wish I had planned to do the labs myself. (I did not get the equipment or make the time)

Would be helpful to have a list of additional practical tasks, with less verbose instructions but covering more areas within the same topic and allowing to learn in-depth and/or in-breadth.

### How would you rate the overall organization of the course?

Very clear and detailed

The trainer was very knowledgeable. Was able to answer all of our questions and more.

very good trainer, but sometimes he was switching too much on lectures and doing some fix on labs. it makes a bit more difficult to follow, but I understand the time constraint.

I have already evaluated the course, but after the last lab session, I feel like updating the score. the trainer is very good, but the last session on debugging tools was really rushed. And this is one of the sessions I was hoping to get a structure view on it. In mid lab the trainer had some unexpected issues, which caused him to be blocked a bit and he started "debugging to himself", switching a lot between target and host, recompiling and not many explanations of the thought process. Again, maybe the others could follow, but as for me it was a new topic, I was constantly trying to catch up with what was happening. This affected negatively the rest of the course also, e.g. the perf was incomplete. I think he could have made use of the extra session planned, and give the rest of the material in 1 or 2 hours. This is a very punctual issue of the last session, the trainer was very good in all other ones.

## How did the course meet your learning objectives?

13 responses

## Comments and suggestions

3 responses

Most of it yes. Practical applicability in projects needs to see.

My needs were primarily kernel & uboot and building on buildroot. It would have been better for me if these things were done in more depth and skipped some other things

I think if the lab session can be done separately or been recorded and the overall session can be less than 4 hours that would be great

## What part(s) of the course did you like most?

7 responses

labs

Lab session where we got a minimal linux kernel to boot.

Detailed explanation along with the practical was really helpful

All are great

Practical labs

The Labs to reinforce the learning of the slides was very useful

first labs, building a toolbox, uboot and managing the changes with NFS

### What part(s) of the course did you like least?

4 responses

na

graphics and audio stack

the starting time of 7:30 GMT :D

licenses

### What reasons prompted you to choose a Bootlin course?

13 responses

### Comments

3 responses

na

I've been a massive fan of bootlin for online training material for years. it was great to finally do one of the instructor hosted courses

I was quite new on linux environment, so sometimes it was quite a lot to digest, but I am really pleased I took the this course

## Further training needs?

5 responses

May be yes, some advanced topics

Buildroot

Embedded linux debugging

A valuable addition to the collection of Bootlin courses would be a path dedicated solely on the security topics from the supply chain security and audit to the tidbits of writing secure kernel and application software.
