Overall I would say it was a really great course where I have learnt a lot of concepts and the lab part was very interesting has the trainer was always there helping out with any issue with faced.

The labs are very helpful, but the theory is explained very fast

Very useful in general, but in some points not clear at all. To explain that, bear in mind that I did the quiz three times:

- 1 - The one I submitted before the course and without looking at the slides (9/50)
- 2 - Looking at the slides before the course, I wrote the responses in a textfile
- 3 - The one I submitted after the course (50/50)

Although having the slides, I did not manage to get all the correct answers at the second time. For example, in the slide 242, it looks like that the shell is mandatory, but it is not if no scripts are used (question 19).

And there is a mismatch in the numbering at the slide 295, this number is repeated in three slides!

There was many concepts that was covered that I did not know or I knew but not fully. Although the trainer is new in teaching(as the first day he was a bit nervous and was trying to make himsefl clear) during the following days I could feel more confidence and really could ask anything and for those answer he did not know he was honest on saying that he would ask his colleague witch is a positive.

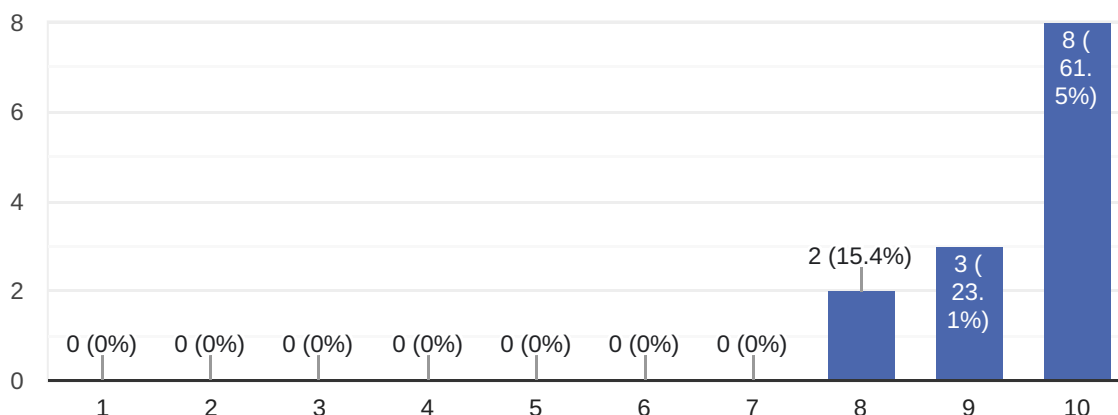

a lot of text and a bit dense, I would like to see more diagrams.

It would be good to suggest the attendees to read the theory beforehand

Although they are quite clear in general, at some points is hard to continue without help.

I have learnt a lot from this Labs. I will redo again. Very interesting!

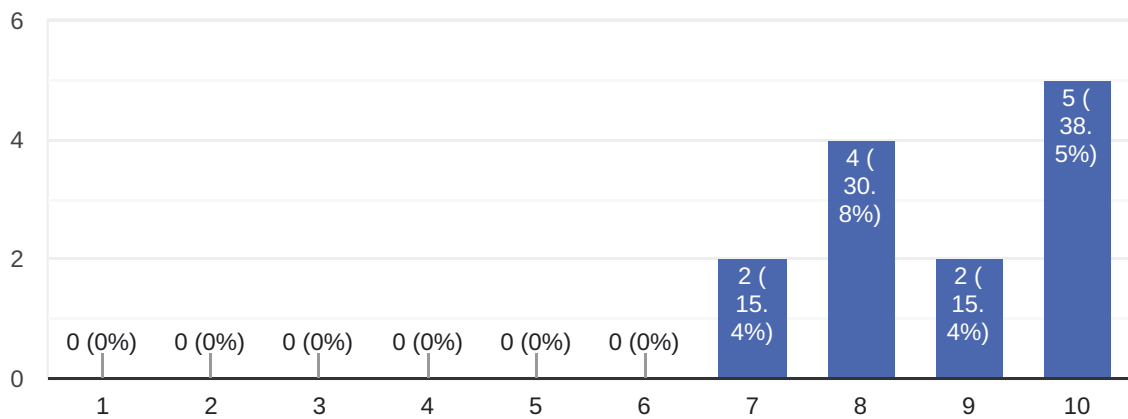

Very good labs

Some fixes: When creating the etc/init.d/S03modprobe script, the execute permission needs to be set and is not mentioned in the lab manuals. Also on page 65, the third line of the first script begins with the dollar sign, which is confusing with the prompt. I suggest changing the prompts to # or adding the backslash in another position.

### How would you rate the overall organization of the course?

I did not do the registration process, so I cannot give my opinion about it.

Well organized.

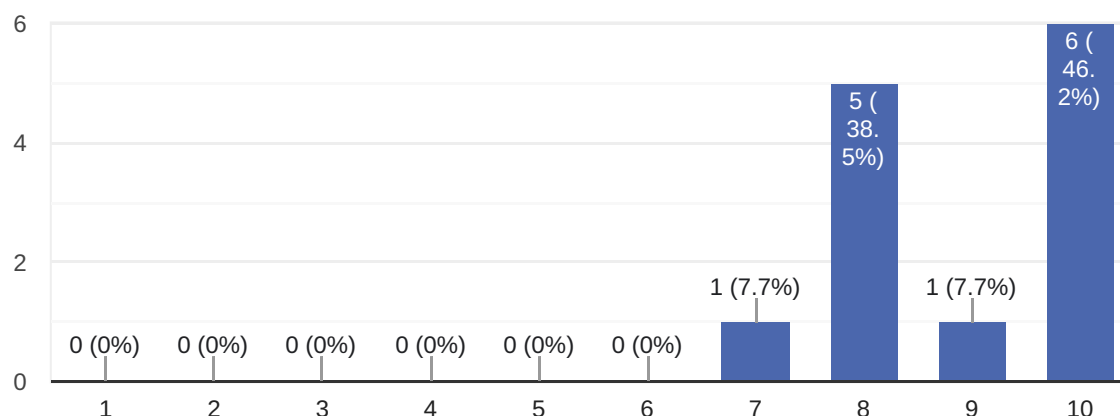

I guess the theory needs more time, which can be autonomous work before the course

Great professional, great lecturer, great person. I loved to share time with Bastian. The ONLY comments are: 1. he can still work a little bit on the speech skills, as it is noticeable that he feels a little nervous when talking to public, 2. he could be just a little bit more strict, because sometimes people were talking, and he was not able to silence the people, so his lessons cannot be heard.

An excellent trainer with a proven embedded Linux knowledge that was also very close and helpful.

As he is new in teaching there are a lot of room for improvemnet suchs:

-Communications skills: just make sure to communicate more and giving more pratical example of some topics (although there was topics that he gave us pratical examples)

-First day I could see that he was a bit nervous speaking but in the following days was okay

He helped us a lot during the pratical labs which is really good.

Overall a thing with more prattice giving lectures he has a good potential to be a really good trainer (He already is!)

Do not be scared to put your foot down during practice sessions if you need to control the flow of the lab.

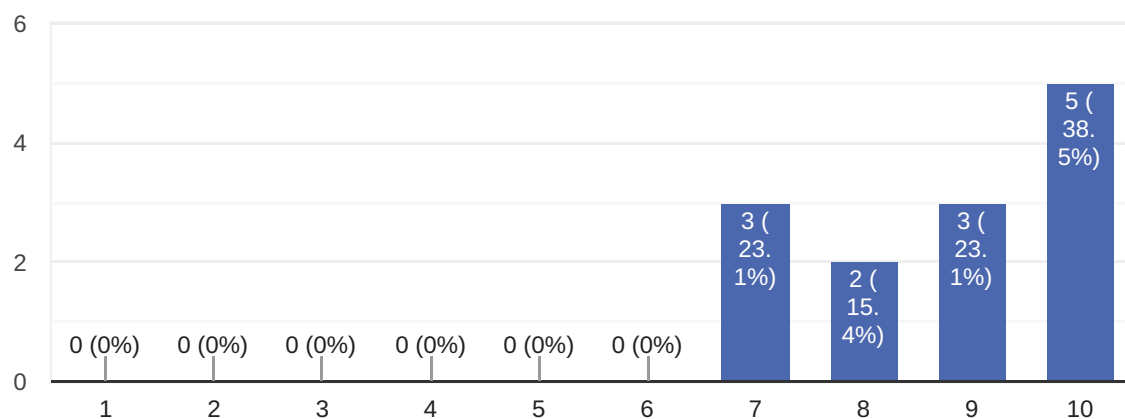

The trainer has a lot of knowledge, but maybe he can improve communication skills

### How did the course meet your learning objectives?

It is hard to assimilate all the learning objectives in one week and sometimes I executed commands without understanding at all what I was doing. Anyway, I think this is normal and I should try to reproduce all the steps by my own with another board I have.

In general, I am happy with the course

### What part(s) of the course did you like most?

8 responses

The kernel building

The labs

Creating a Linux system with only the kernel, device tree blob and Busybox.

Practical Labs

The laboratory

LABS

The way it connects the different labs

Discovering how the linux kernel compiles.

### What part(s) of the course did you like least?

6 responses

The licenses part

There is a lot of information in the course. It is not a bad thing, as it is very complete... but there is not enough time to assimilate some lectures, and sometimes I have felt lost because the slides (full of information) were passed very quickly because they were not very relevant for the labs.

Rebuilding lots of times the kernel or the rootfs.

Lecture

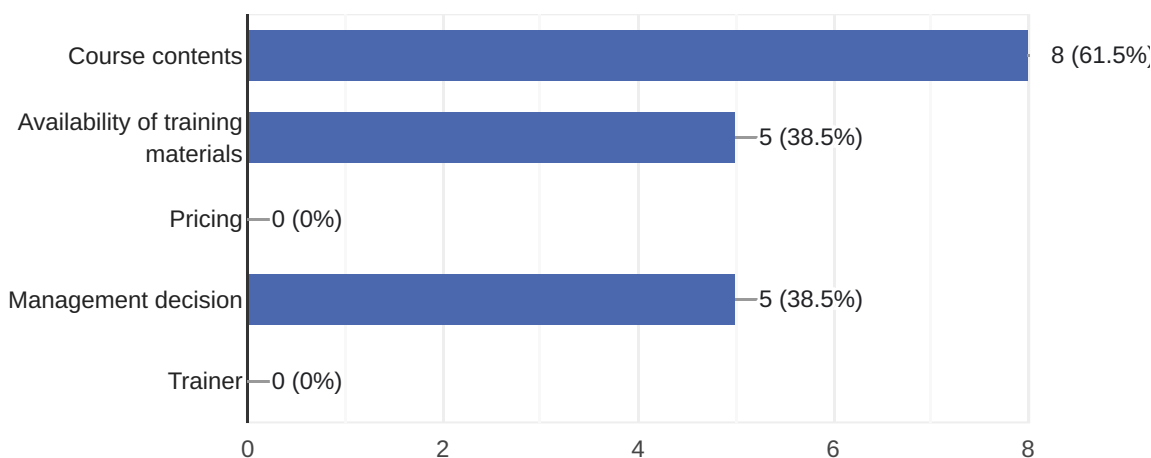

The theory was not fully understood

None.

### What reasons prompted you to choose a Bootlin course?

13 responses

### Comments

0 responses

No responses yet for this question.

### Further training needs?

3 responses

The other courses you already have.

Linux Kernel Development Course. If possible a Public on-site training

I am interested in the PREEMPT\_RT and Linux drivers courses
