Very well focused

Provide a microphone for the professor to enhance the volume of the lecture. At times, the background noise and the distance from the professor made it a bit challenging to hear.

Good balance between theory and practice
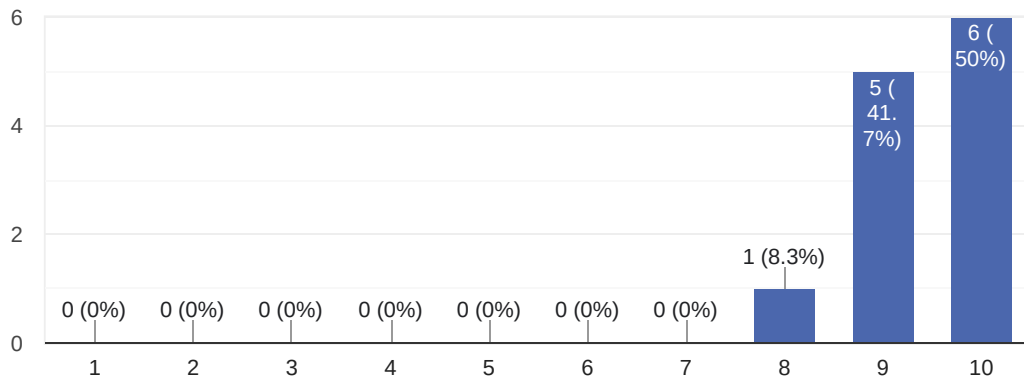

How useful were the lectures?

Sometimes they are a bit confusing because you have the necessary information in other paragraphs

The labs were great. However, perhaps the Buildroot labs could be improved by providing something pre-prepared to avoid the long compilations of the kernel and toolchain.

Great labs, might help references to the slide numbers to search for information.

Good idea introducing "known issues" and "bad code" to see possible failures

Some make commands were so long.

Sometimes the practice was no clear

## How would you rate the overall organization of the course?

I would have liked to delve a bit more into the device tree. In the course, we modified the device tree, but without having a solid understanding of how to manage it

Fulfilled my expectations

What part(s) of the course did you like most?

8 responses

The labs

Everything

Labs

Great hands on labs. Well guided.

The debugging tools and applications

Explaining how to create, compile and use a driver for your hardware.

Last one about debugging

What part(s) of the course did you like least?

6 responses

Long building and material downloading times due to a slow internet conection. Perhaps these material could be provided through a hard drive.

Introduction about linux

As compilation times are big, waiting times were bad. Precompiled material should be available in case any problem appears.
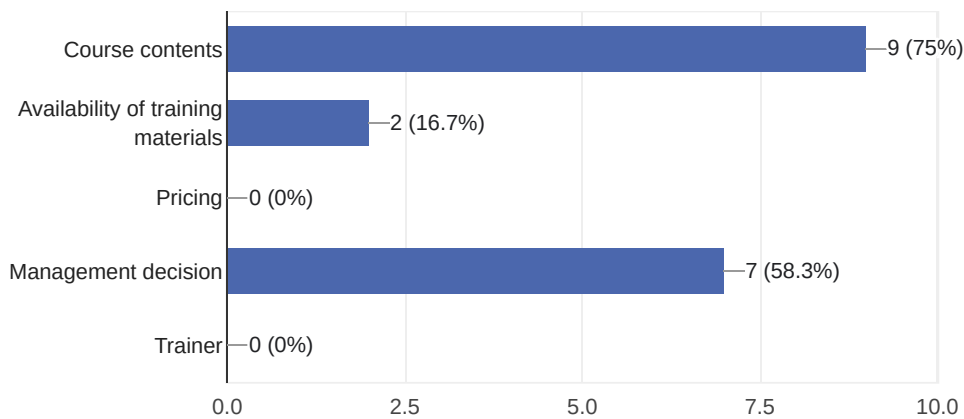

Licenses

The theorical part of the licenses.

Having 2 continued hours of theory
