The course is dense and it is complicated to finish all the practical work 100% within the allotted time.

Peux-être un peu trop de cours sous forme PPT, c'est assez lourd comme support sur 5 jours. Malgré ça très bonne formation, j'ai beaucoup apprécié la partie pratique.

How useful were the lectures?

Add slides to comment graphs with picture only.

I did not have enough knowledge on the subject to fully understand the lectures
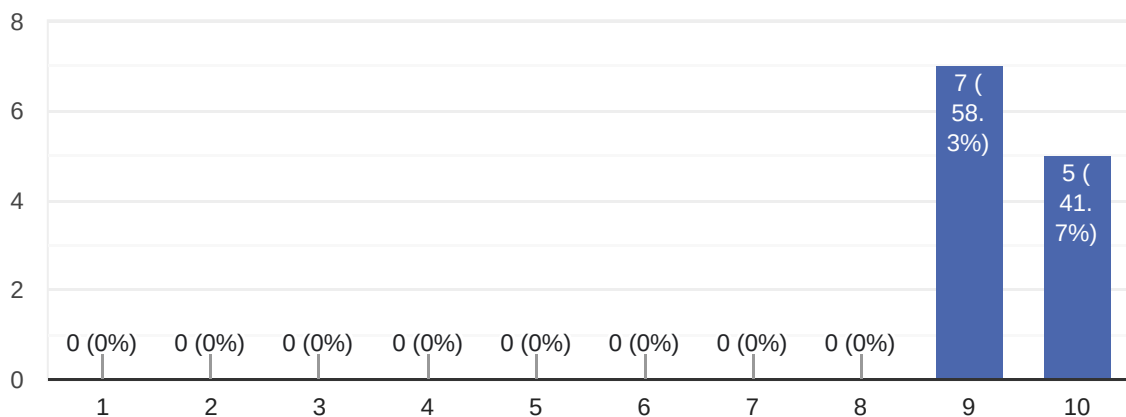

very interesting and complete but at the end of the week it can be hard to focus

Might add a bit of interaction to help keep up with the lessons and teachings. Especially on the bootloader part (first day) that has less labs than the other days.

How useful were the practical labs?

Add a note indicating which lab is dependent on the success of another. Several times, I told myself that I could take a lab to catch up, which caused me problems later because I had not taken certain necessary steps for the smooth running of the next labs.

Very clear

excellent, perfect amount of difficulties and length

It is nice that you have to add kernel modules and other stuffs one after the other. It helps manipulate the tools and commands.
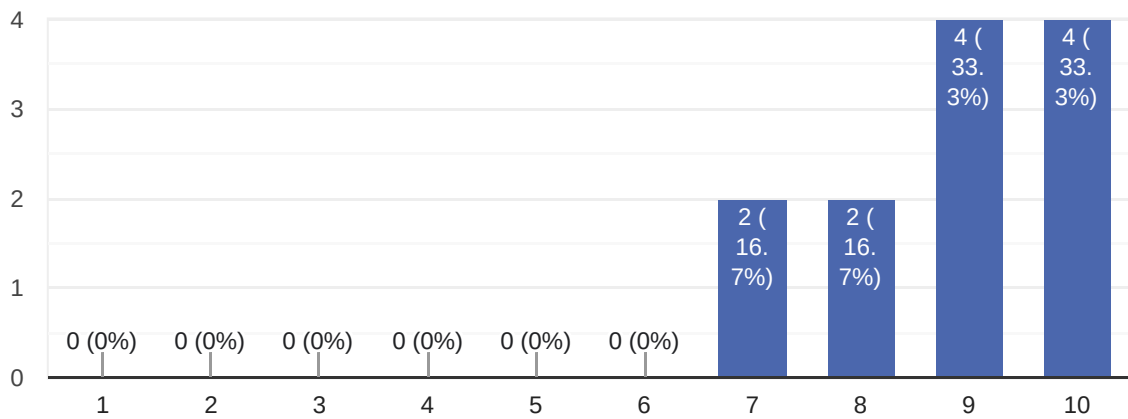

Formation complète et compréhensible. Richard à su être à l'écoute en cas de besoin.

RAS

What part(s) of the course did you like most?

8 responses

The U-Boot part

The labs

Créer from scratch le kernel, connaitre les différentes configuration et ensuite la mise en place sur la carte.

Labs when building embedded linux from scratch

Practical Labs

trying to go further with practical labs

Probably the step by step building of all the components

Buildroot

What part(s) of the course did you like least?

7 responses

The setup of cross-compilation toolchain.

Licence lectures

Aucune

All the labs

some lecture at the end of the week, not because of the content but because I had a hard time focusing

The bootloader part was harder to follow due to less labs. Not that it is bad though.

Bootlaoder

What reasons prompted you to choose a Bootlin course?
