I'll definitely be using what I learned at work.

Directly relevant.

-

How useful were the practical demos?

Comments and suggestions

3 responses

My rating is based on the fact that I only had time to do the first lab.

I especially liked the labs because they were not too easy (not every click and every command is mentioned). This required a bit of time for me as a yocto newbie but it made me looking up things in the documentation and learning much more.

Great work! Keep it up!

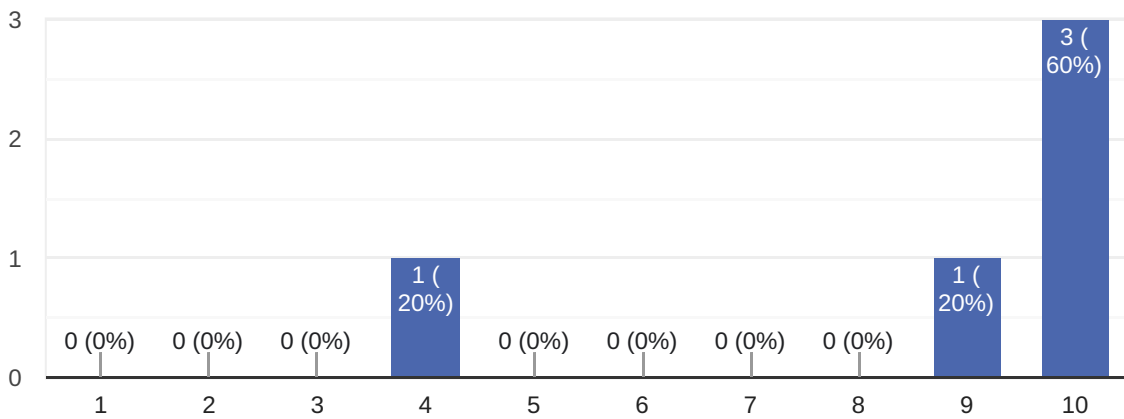

Maybe there could be more tricky examples to try out (after lectures)

How would you rate the overall organization of the course?

Probably using MS Teams nowadays would fit most peoples setup at their jobs and avoid additional installation effort. Also would a SW that integrates the video call and the chat probably improve the experience.

It was not a big issue but its the only little thing that I think could be improved, so I mention it :-)

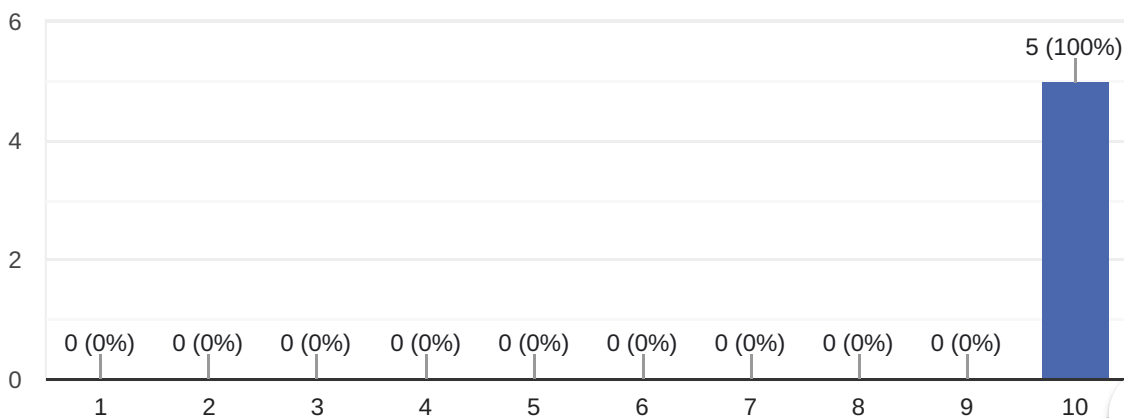

I like the approach to leave the chat open for a long time so we can ask questions also after the course.

Lectures were really packed. Keeping up an healthy pace while trying to apply the labs all together with a dayjob was cumbersome. If there was a split 1 or a half week of a break that would have been great imo.

How would you rate the trainer?

Great! Lots of experience to share, organized and not too proud to say "I can't say right now, I will look it up" and coming back to the topic later. Handles live demos very well!

I am teaching FPGA Design myself at a University, so I know that getting to this level - not only technically but also from a teaching-perspective - is no easy thing. I appreciated Luca a lot.

How did the course meet your learning objectives?

No responses yet for this question.

What part(s) of the course did you like most?

3 responses

Concrete usage examples for recipes and layers.

The Labs.

They wouldn't work without the lecture - but definitely the labs made the content sticking.

Very well scheduled and structured

What part(s) of the course did you like least?

2 responses

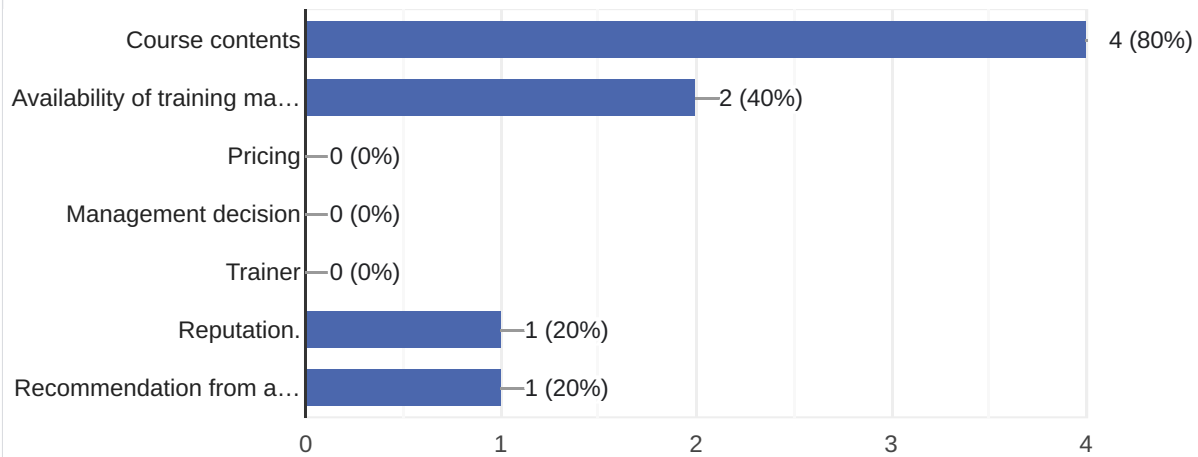

Package management. I don't think we'll ever need that.

None

What reasons prompted you to choose a Bootlin course?

5 responses

Comments

2 responses

Bootlin's reputation is epic. I know that people from the Linux Foundation take your classes.

I will recommend bootlin

Further training needs?

2 responses

Linux application development. Similar to the Linux Foundation 401

Probably at some point - I know the homepage and bootlin will be the preference
