Overall the course was nice. Structured, a lot of technical details and the teacher was proficient.

I'd love more practical work.

How useful were the lectures?

Lectures were pretty good and contained a lot of information. But after a while often one loses track of the trainer and therefore it would be nice to have some little interactive quizzes here and there to check the knowledge and also break the monotonous lecture style.

How useful were the practical demos?

It was good to see how the labs could be done, but still it was pretty fast and sometime hard to follow. However, it is recommended / planned to do it on your own anyway.

How would you rate the overall organization of the course?

Since I was complete new to this topic I learned a lot, but personally I have the feeling that I was able to catch about 10% of the whole information. So I am not feeling quite confident and I have to rethink everything again on my own.

Adjusting a meta-oe package, e.g. increasing the version of dropbear, would be a neat thing in the lab-part of the course.

What part(s) of the course did you like most?

3 responses

Live demos

Useful tricks, e.g. nfs for rootfs/TFTP for kernel on the dev-host
Working with actual hardware in the lab

Devtool usage for development workflow

What part(s) of the course did you like least?

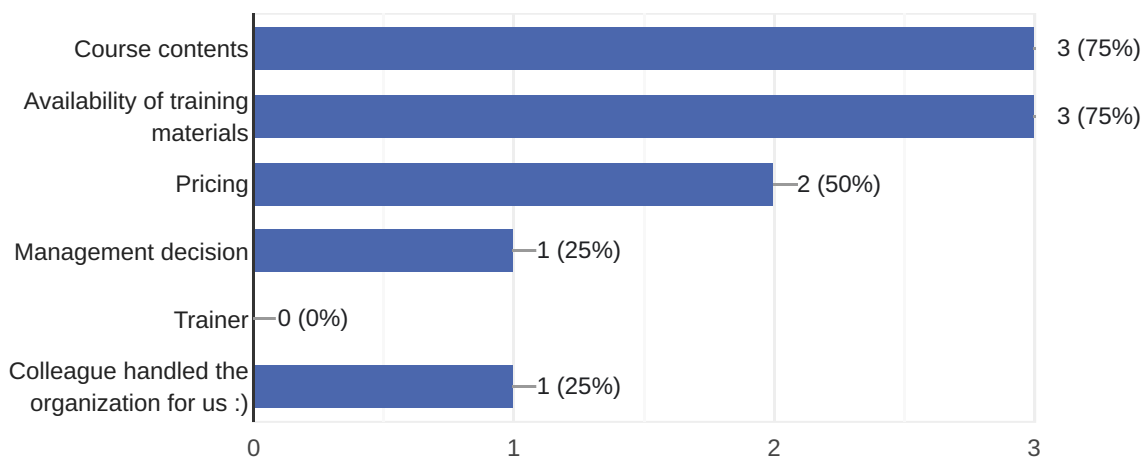

1 response

When the information got to fast to deep.

What reasons prompted you to choose a Bootlin course?
