Great slides, great labs and especially great trainer!

Great course! Slightly hard to pay attention to the lab, du to high tempo.

Overall I really find it useful. The instructor has a lot of experience and that increases only the overall satisfaction that I had. My only remark is with the engagement, as a point of improvement. Being a online training, it is difficult to know if the audience is getting all the important points from the lecture. I would suggest specially for online training to use tools like Mentimeter. This allow the instructor to see if the audience had understood a certain subject right and it also help to make the lecture less monotone.

All the necessary information is given. I looked through the slides in advance. This was crucial for me to follow the course

How would you rate the trainer?

It is hard to find a person, which is not only very knowledgeable, but also good teacher. My colleagues told me that he was really good, so I had good expectations, but it was definitely better than I expected.

How did the course meet your learning objectives?

I wish more advanced topics were part of the lecture, but having so wide spectrum as audience I understood the reason.

What part(s) of the course did you like most?

3 responses

That I got a big picture over the topic Yocto thanks to the slides, the labs and the trainer.

The lab, and the last part giving us useful tools to easen the workflow, tied everything together

The demos were really good. It explained really well in general the lectures.

What part(s) of the course did you like least?

2 responses

Following the lab was hard. In general a bit hard to pay proper attention the last hour. Quite a lot of information to take in and digest.

Some of the lecture parts were to long and cover several topics that maybe with my suggestion from using mentimeter would be less monotone and the information would be easier to learn.

What reasons prompted you to choose a Bootlin course?

I was impressed by how effectively the course provided valuable insights into this complex topic.

Further training needs?

1 response

I would be interested in the Embedded Linux development course
