Coming with zero experience of Yocto, I was expecting that after this course I would be ready to get hands on an existing project of my company. After the course, I still feel a bit lost. I have a starting point of course and a better understanding of the structure, but feel really overwhelmed from the content of the course. The portion of the content I was able to comprehend efficiently is way less than initially expected.

What part(s) of the course did you like most?

1 response

The practical labs and the trainer.

What part(s) of the course did you like least?

2 responses

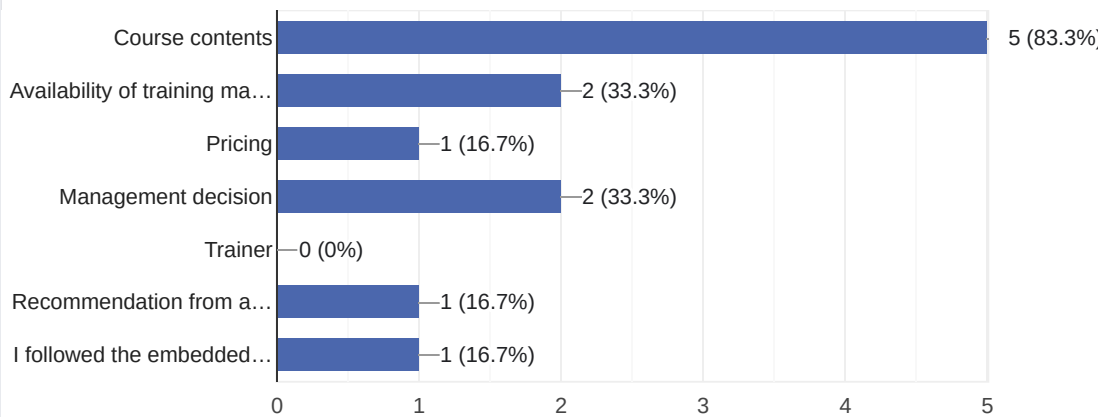

I have the feeling that the structure of the course's content is like "another big documentation file". Meaning that, it looks like I could get all this info from the official documentation on my own pace. I missed the added value on top of that, especially for the price cost of this course.

Minor issues with the labs for Beaglebone

What reasons prompted you to choose a Bootlin course?

Further training needs?

2 responses

I would be interested in more general embedded linux, kernel, or driver development

A package if you buy several trainings would be very nice
