The lecturer was really well prepared. I did not give 9 or 10 because there could have been more background info or information about the rationale of certain Yocto design decisions.

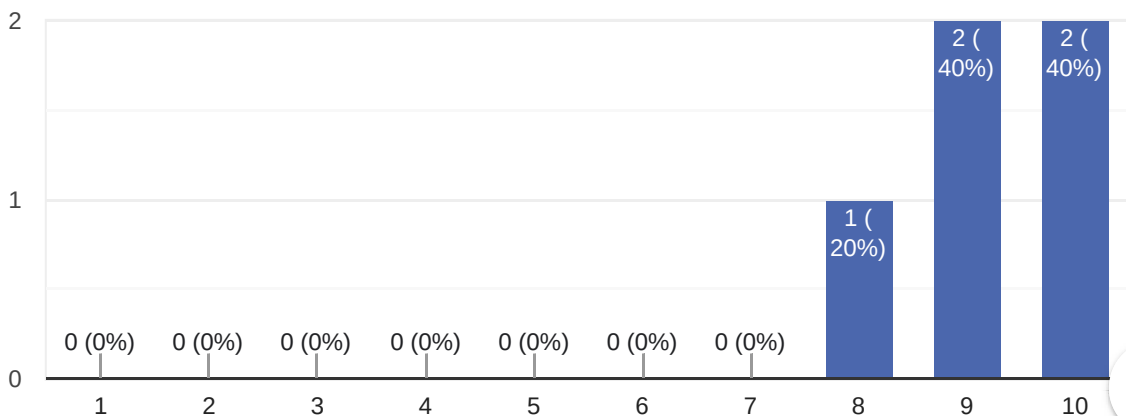

Labs were hard to follow in real time due to build times, maybe request builds before the first class starts via a wrapper script

There could be additional smaller course about petalinux too :)

How useful were the lectures?

The demos were good and covered the essentials. I would have hoped for more examples specifically targeted to the Yocto gotchas, that I encountered. They were covered in the lecture, though.

I think it would make sense to have more time in-lesson to follow the labs.

How would you rate the overall organization of the course?

Maybe a one day (or weekend) break in the middle could be beneficial to digest info and do labwork. Other than that everything was very smooth.

How would you rate the trainer?
