Perfect teaching and overview over Yocto

Comprehensive course and a very good trainer with a lot of expertise. However, the Lab examples seem a bit outdated and could need a refresh.

- It was very good that the slides were available in advance.
- During the training I would have liked to see more examples from the trainer in the command line to get a better overview of the structure/commands of Yocto

Comprehensive slides, maybe a bit more examples in the slides and information about best practices, folder/layer/recipe structures. Relationships between all the presented things.

pls more labs

It's always very good to have hands-on experience. A bit outdated lab exercises and sometimes a bit unclear instructions. But all in all it greatly helps to follow the course and understand the concepts.

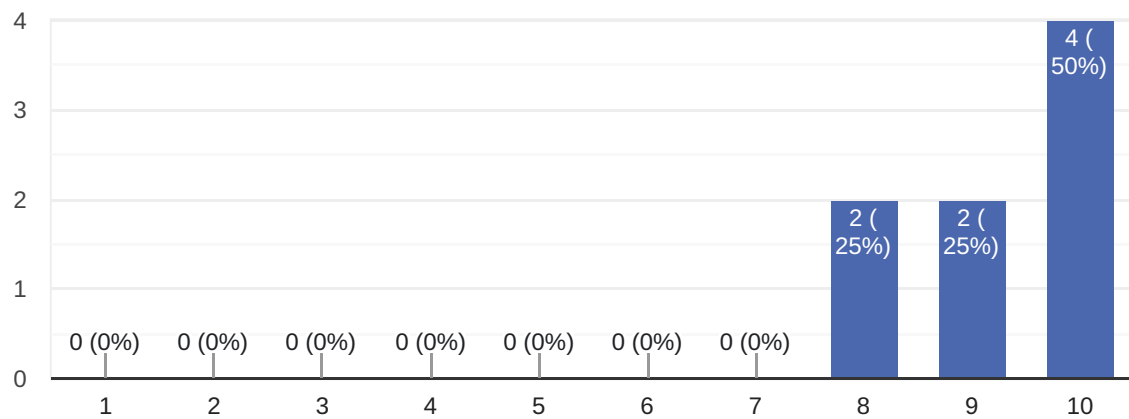

Some of the exercises were described in great detail and on the other hand it was very difficult to understand what to do

direct link between lecture and practical labs was very useful for understanding

How would you rate the overall organization of the course?

No Problems - good balance between lectures and practical labs, and also the trainer suggested to start bitbake before lunch or prior to the lab and then continued the lecture until the processes were done etc. so that the course flow was good without too much waiting times.

the time for the lecture at the end was a little low, it felt like a little rush to finish the slides

Good presentation, good to understand, very in-depth expertise of the topic and could help with all problems and questions.

Great training

It was beyond my learning objectives what has been taught during the course.

What part(s) of the course did you like most?

6 responses

Labs

Trainer is very helpfull and good trained

The practical labs and the debugging examples e.g. to check recipes, priorities - might be also extended as this is a great value to the course.

The fact that I built yocto myself and was able to test it directly on hardware

Practical Lab / Structured "hands on" with demo board

What part(s) of the course did you like least?

3 responses

parts where only a high level view, general concepts were provided, could be improved by best-practices and concrete examples

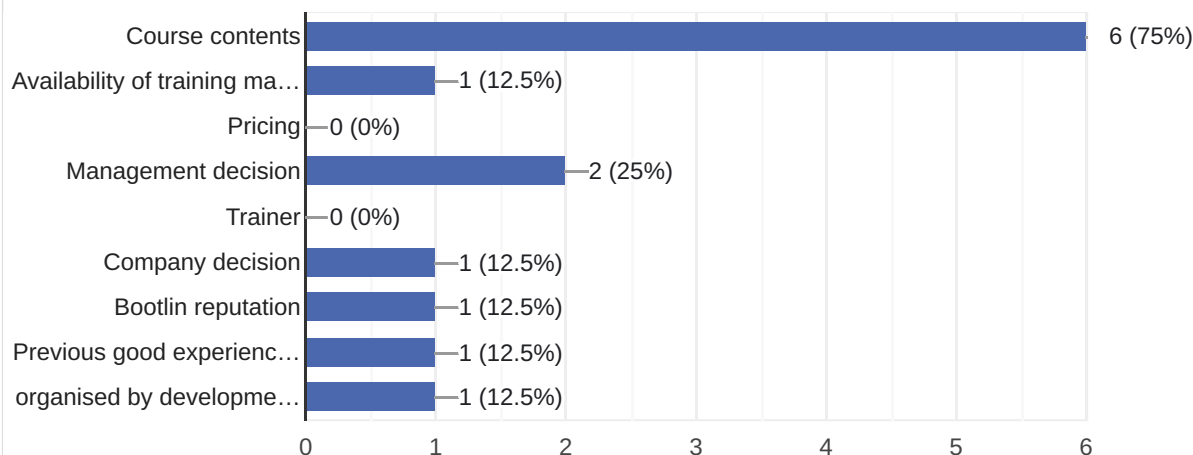

Virtual packages (I don't think I'll need this in near future ;))

nothing

What reasons prompted you to choose a Bootlin course?
