Course was good but wish there were more labs

Lots of Debugging tools for almost every need of a developer

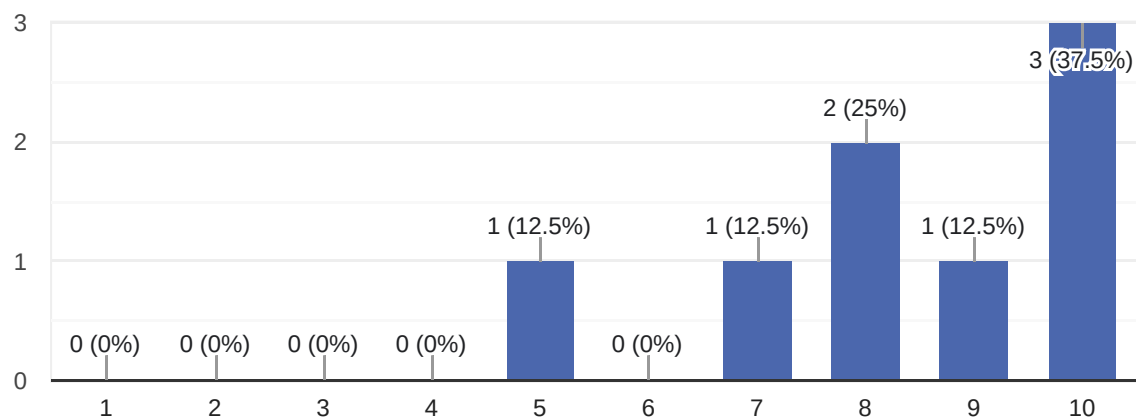

It was very informative.

Great Training with informative content.

## How useful were the lectures?

Trainer seemed to be rushing through slides

Content and Lectures were good, but too many information to digest in 4 days. Otherwise, its all good. The success of the training depends on how well we use these tools in practise.

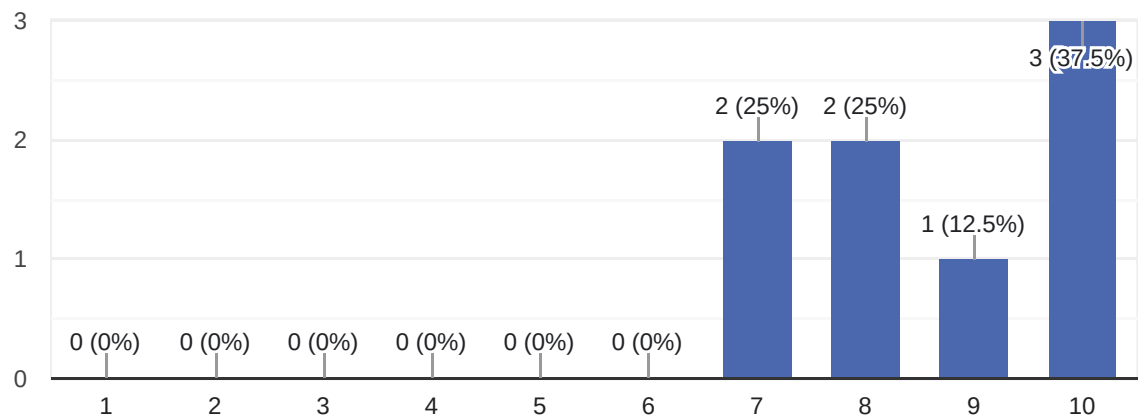

It was very informative.

Definitely helpful in using few of the debugging tools in our development.

## How useful were the practical demos?

## Comments and suggestions

2 responses

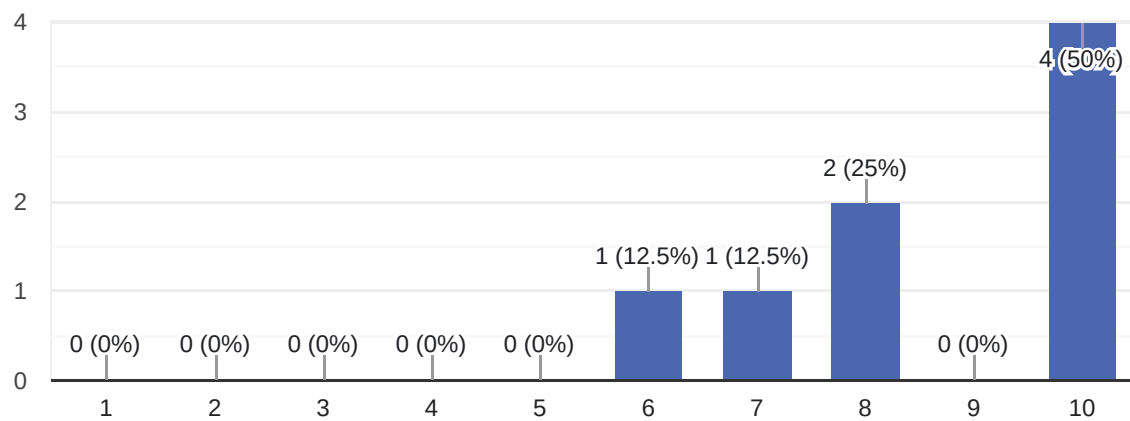

Good exercises or labs to simulate performance issues, crash etc. and live debugging was good.

It was very informative.

## How would you rate the overall organization of the course?

Since it was virtual, I felt it was a bit fast to take in all the information.

It was very informative.

## How would you rate the trainer?

## Comments and suggestions

3 responses

Very patient and answered all the questions we had.

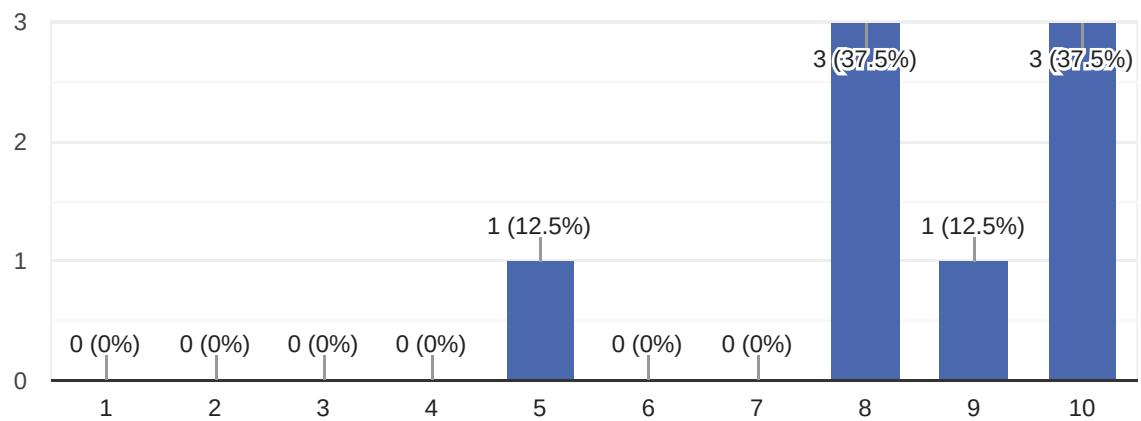

It was very informative.

Alexis was extremely sound with the information he was presenting and made sure to provide answers even if he wasn't aware before next day's sessions.

## How did the course meet your learning objectives?

8 responses

## Comments and suggestions

1 response

It was very informative.

## What part(s) of the course did you like most?

3 responses

Kernel debugging

Kernel debugging.

KGDB, GDB, Valgrind

## What part(s) of the course did you like least?

2 responses

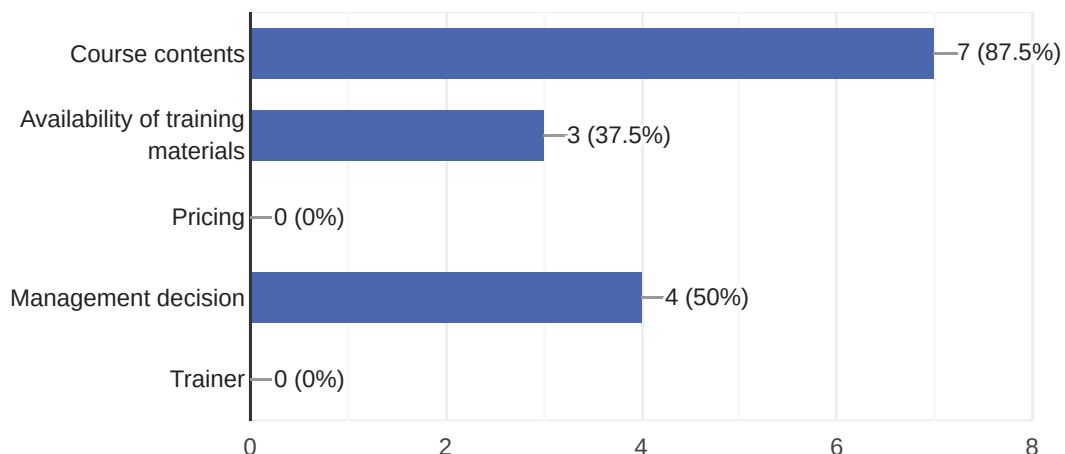

Nothing like that. Some tools I had used long ago, so it was a kind of refresher for me

None.

## What reasons prompted you to choose a Bootlin course?

 Copy

8 responses

## Comments

1 response

It was more about user space debugging. But most of the participants work on kernel side of things. So, may be incorrect target audience.

## Further training needs?

1 response

It would be good to have a separate application, kernel debugging course IMO.
