The training was well structured and demonstrated great preparation by the trainer. As a suggestion, I would recommend reducing the number of topics covered and slowing down the lab sessions to allow participants to complete the exercises interactively together. Additionally, making the labs even more engaging, perhaps by involving the trainer more actively during the hands-on parts could further enhance the experience.

maybe less topics and 2-3 labs more

I'm giving good but not excellent rating due to the fact that I was hoping it to be a bit more detailed. You do a great job sharing all the resources upfront so that I could check the content of the course so it wasn't a big surprise to me but I still was hoping that a bit more time will be spent on explaining more complicated topics than the basic ones.

Very good!

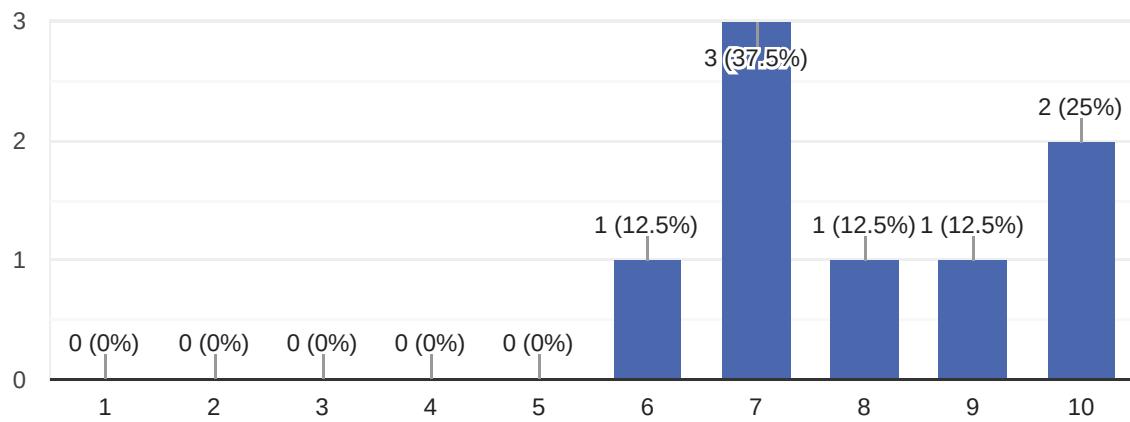

A bit more on LTTng/Trace Compass (like flight recording mode) would be great.

How useful were the lectures?

It would also be great to include a final summary that recaps all the tools covered during the training.

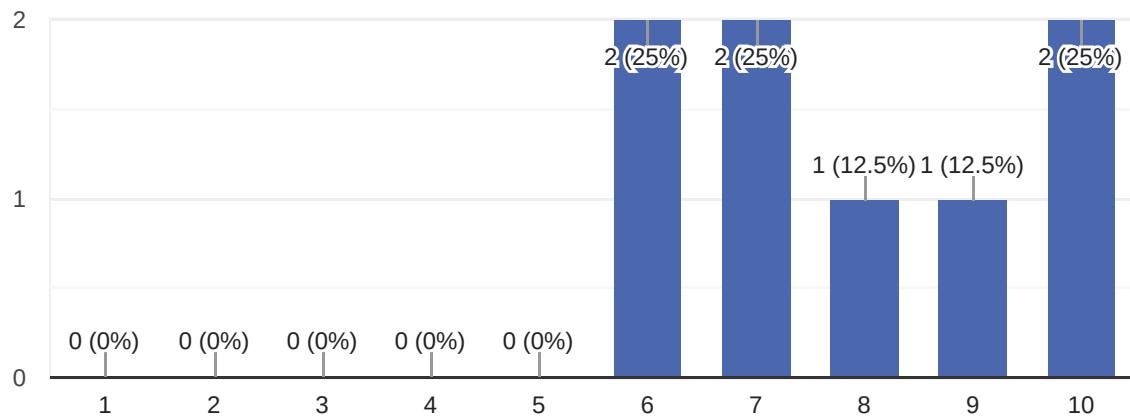

To much of it was to easy *to me* but I understand you have to be prepared to all levels of knowledge participants have so I don't have any suggestions on how to improve it.

Very good!

How useful were the practical demos?

Would be great to slow down the labs part to allow the trainee to follow step by step

The demos were very useful but unfortunately most of the examples were simple and I would love to see some real-world example, not something synthetically created.

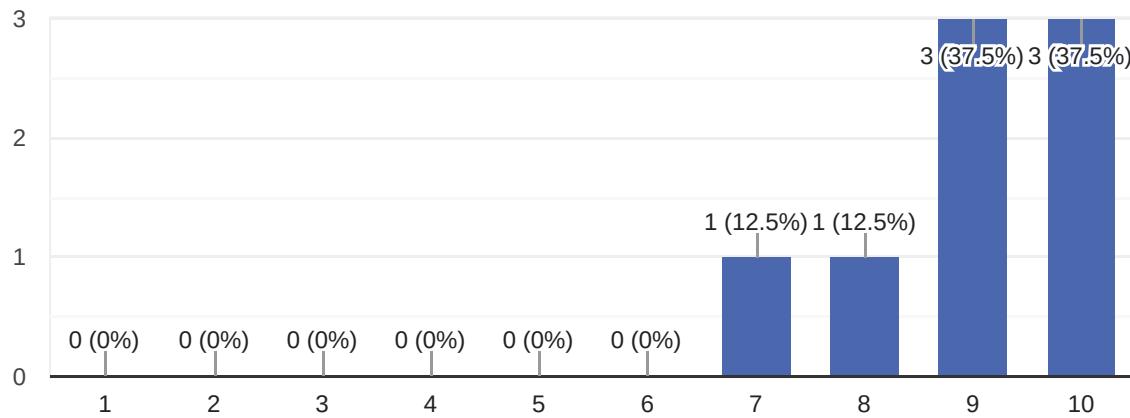

Very good!

Assumed that we can do some labs during the training

How would you rate the overall organization of the course?

The organization was great. I wish the a bit more time was spent on more advanced topics while less on the simple ones but I understand where this choice is coming from.

Very good!

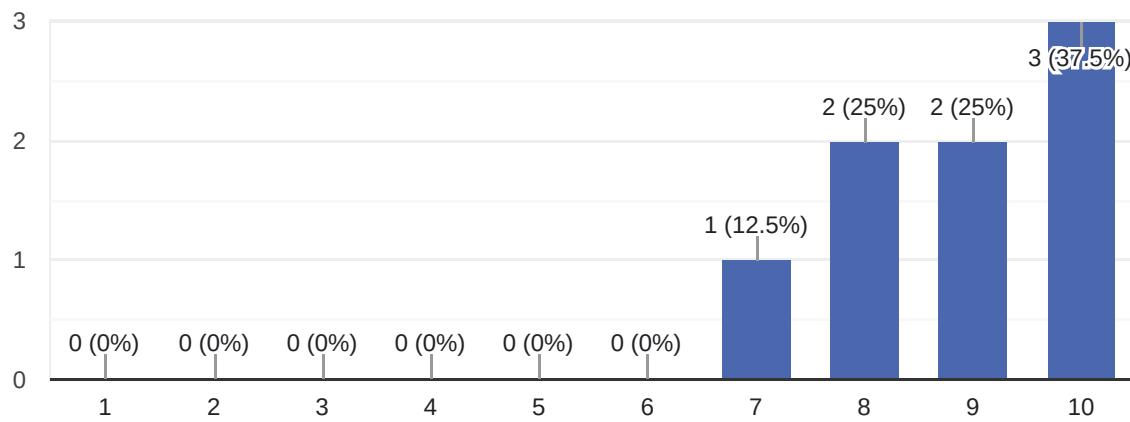

Everything was going very fast. This cours could have taken the whole five half days (and even more) and include more time for concrete examples

How would you rate the trainer?

The trainer's preparation was impressive. To further improve the experience, it could be beneficial to increase interaction with trainees during the session.

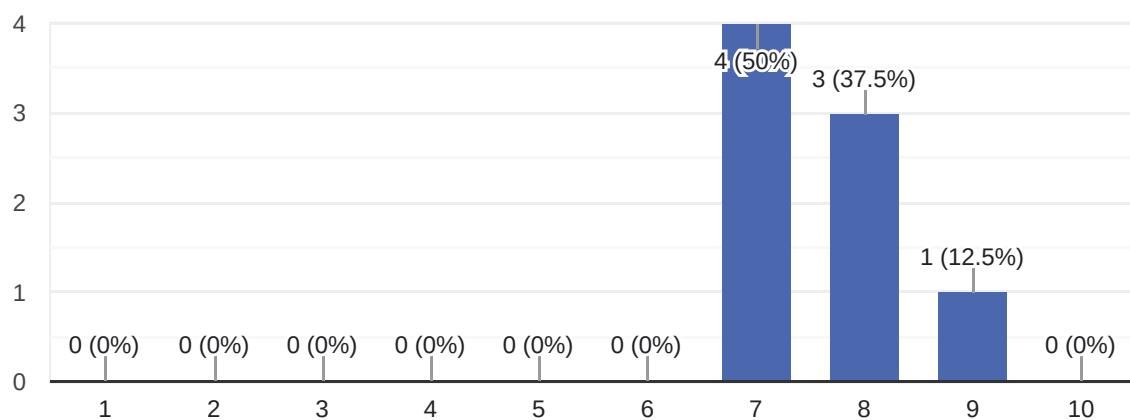

I really liked the fact that even if the lecturer didn't know the answers to questions he would make sure to note down and then give answers in next sessions after checking this. He was also very patient answering all questions and took time to make sure everyone had opportunity to ask questions.

Very good!

How did the course meet your learning objectives?

It might also be helpful to better filter the audience so that participants share similar fields of interest. Having around 15 participants in a single training session might be too many if the goal is to maintain good interaction during the exercises. A smaller group size could help ensure everyone can actively participate and follow along.

Again, it turned out to be less advanced than I originally anticipated so I can't give higher score.

I would have loved a bit more of non-embedded debugging. Using leveraging a UI to use GDB more effectively, using nsight systems, etc.

What part(s) of the course did you like most?

4 responses

Labs

labs

Everything was quite good

eBPF

What part(s) of the course did you like least?

4 responses

Lack of interaction

Going through the details of basic concepts presented in especially in the first part of the course.

The latest part about the kernel debugging, since I'm not doing a lot of kernel work

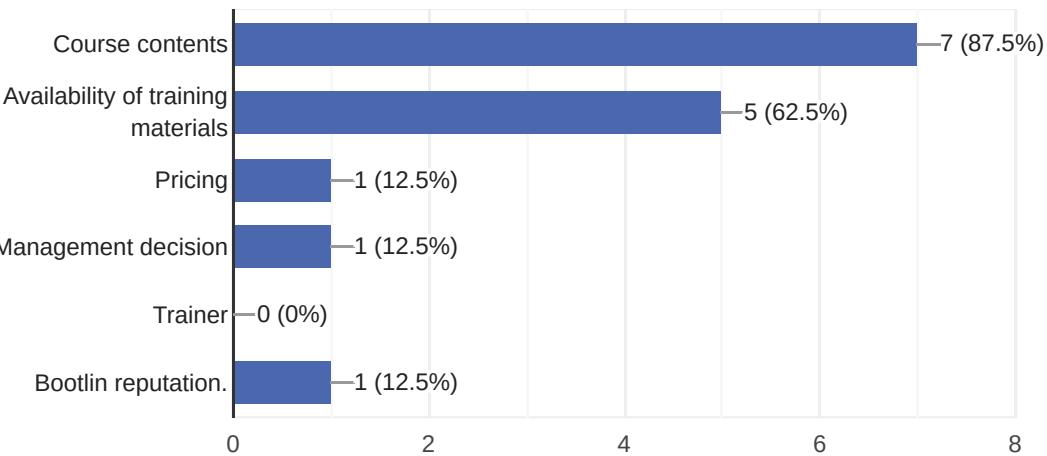

Nothing

Real Time env

I plan to take your PREEMPT_RT and audio trainings from the current offering but the current March dates are not good for me. I hope you will organize some sessions at different time as well.

I would love you creating a "level two" courses for existing topics as well. Something that would skip the basics and focus on advanced topics.

More linux in-depth training would be great! I'll keep using my annual training budget with you next year :)
