Excellent course but I think there is too much material, therefore I suggest to split the course in two.

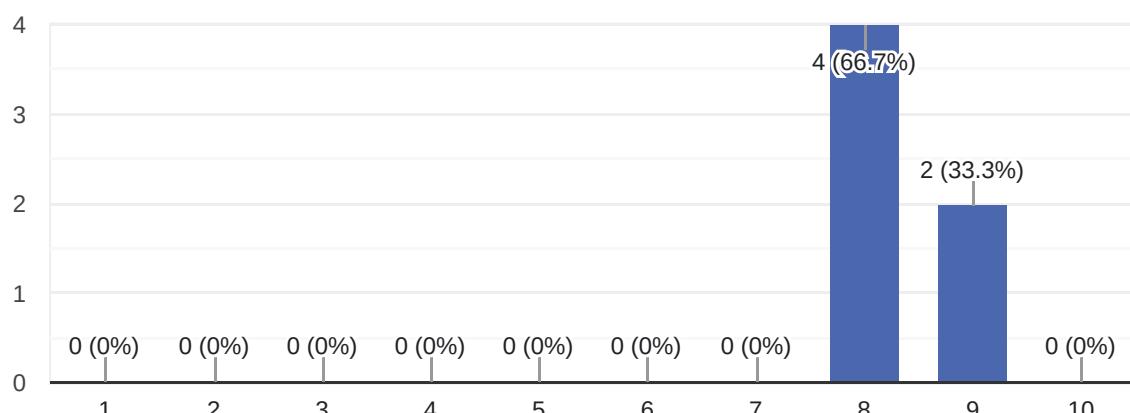

For the (entry) quiz, make answers optional instead of mandatory.

When not knowing the answer, I would prefer to not answers instead of randomly choosing one of the answers so the results are more trustworthy and not inflated by luck.

The lectures focus is on ethernet but adding some information on what is also relevant for wireless on the slides could be a plus. Even if it is not talked about during the lesson.

## How useful were the practical demos?

Rebuilding the whole yocto image is indeed a simple way to make the demos progress, but I find it interesting to see others workflow, so spending time a bit of time sharing/showing your real workflow would have been interesting for me (even if it requires more setup).

Demos are always useful to see the practical side

## How would you rate the overall organization of the course?

I didn't notice that the first session was starting 15 minutes earlier than others when looking at the training material.

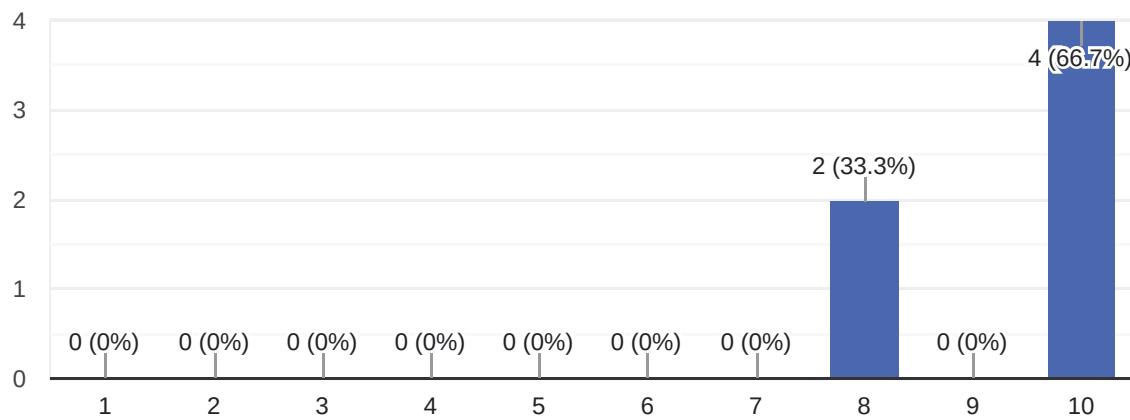

Maybe it's just my fault, maybe it should be more visible ? Or align the start time across all sessions ?

For someone who has very few experience in the kernel networking stack I found that it is very intense. There is lots of information so it is hard to keep focus during the 4 hours. The last hour is difficult. Maybe slot of 3 hours with an additional day could be better

## What part(s) of the course did you like most?

3 responses

skb

The eBPF part.

XDP / eBPF part. Always interesting to discover new technologies

## What part(s) of the course did you like least?

2 responses

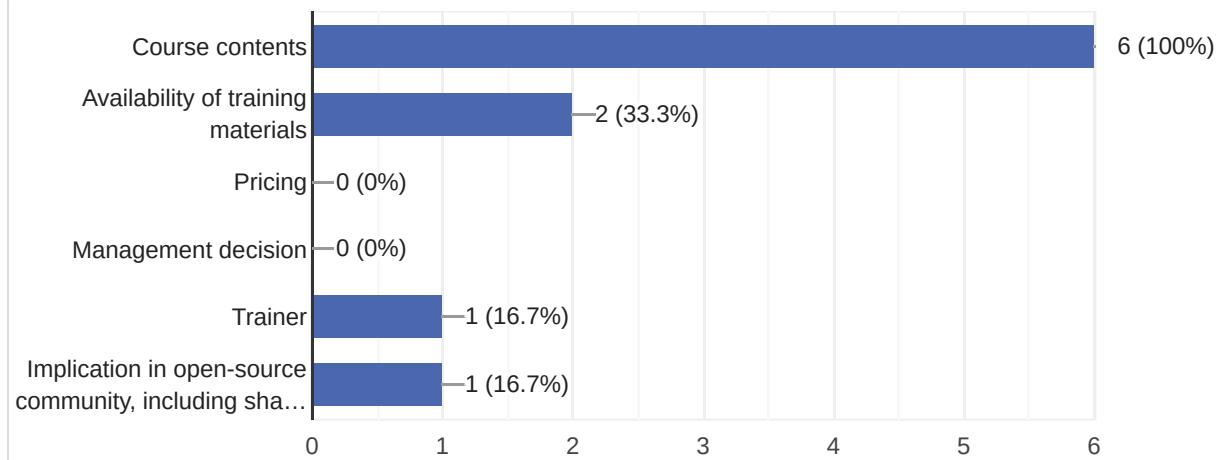

The XDP as I'm not working on this kind of applications, but still nice as general knowledge.

TC part because of the complexity

## What reasons prompted you to choose a Bootlin course?

buildroot

Something dedicated on wireless drivers and their specificities could be interesting
