Very good course, very professional

I really liked the course.

How useful were the lectures?

I guess the lectures goes right to the point with key concepts

I already have worked with yocto, but did not really understand what I was doing. This course helped a lot in understanding the concepts. Also, during the lectures, I could check the yocto build system our company is using, to see how the features are being used in a real-life example.

How useful were the practical demos?

They are a complement for the lectures, they help to consolidate the knowledge

How would you rate the overall organization of the course?

## Comments and suggestions

1 response

Personally I would have needed a bit more breaks between the sessions. E.g. 10-15 minutes 3x per session. The lots of information provided became a bit hard to process in the last 2-3 days.
I feel that there were a bit too much questions from the audience that were off-topic or took to much time, but it is hard to handle this well as a trainer.

How would you rate the trainer?

The aim was to get the base/fundament knowledge on the topic which would eventually allow to continue learning.

What part(s) of the course did you like most?

2 responses

Practical labs

Practical labs which cover the theory

## What part(s) of the course did you like least?

2 responses

Licensing topics

The practical labs are not assessed and the fact that the labs are not mandatory is disappointing.

What reasons prompted you to choose a Bootlin course?

Just some technical issues (connection problems) during the session

Could you please check the questions in the quiz? A few of them made me confusing, even afterwards, after checking from the slides:
- Which components are always found in the rootfs? - user applications are there, aren't they?
- Which statements are correct when talking about .bbclass files? - based on the slides, they can be stored in a folder named classes-recipe or classes-global, not only classes
- Which of these names for my custom layer respects the naming conventions? - meta-my-custom-layer seems a bit odd to me. But it might be correct synthactically.
- What kind of information would you find in .inc files? - Maybe I'm misunderstanding, but why list of files to include is not a good answer here?

Further training needs?
