It was actually good for someone starting new but I felt that price and time spent are not worth of the content coverage we get.

Feels like rushing through the topics.

Well planned, high level is covered well to give the trainee idea about the Yocto as a whole.

## How useful were the practical demos?

 Copy

## Comments and suggestions

2 responses

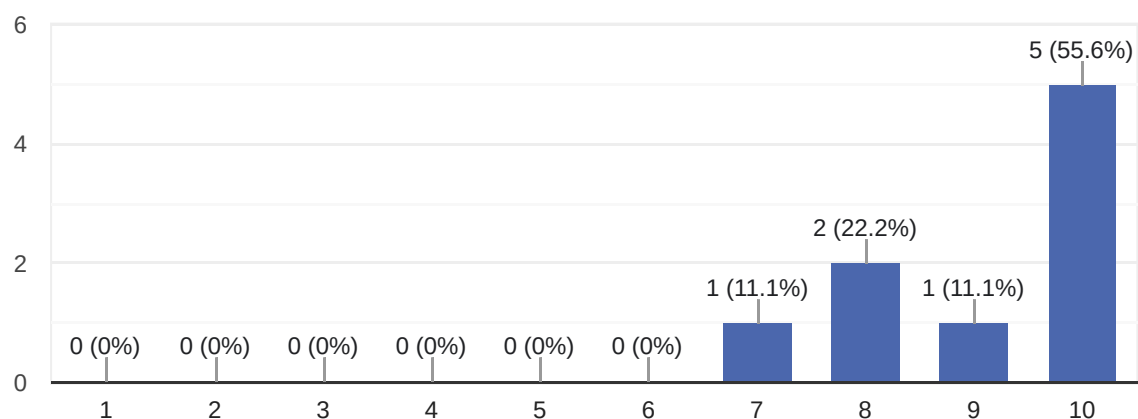

The demos were specific to a board, and I feel that it is not correct utilization of the time spent on those, probably the demo can be made more generic so everyone can try and should not need specific hardware for that.

The demos where sometimes too fast for me.

## How would you rate the overall organization of the course?

As mentioned above, demos needs improvement to make it more relevant and generic.

Should considered less duration and more days.

## How would you rate the trainer?

Patch creation and applying them was not covered separately.

Some kind of summary at the end of each day would be nice.

I would like to give small feedback that labs should use standard industry boards or device, more practical example.

Would like to see more coverage of debugging

## What part(s) of the course did you like most?

5 responses

The knowledge about bitbake-getvar and other Yocto recipe working knowledge.

Layers, Recipe

Trainer giving demonstration to explain a question and certain scenario

Creating custom machine configuration and custom image

The explanation of the concepts is quite clear and has clarified some of my previous confusion about Yocto. This gives me a good foundation to continue learning.

## What part(s) of the course did you like least?

5 responses

The demos I would say, many of it seems not worth the time spent.

Package server Configuration

regarding devtools and KAS/manifest need more time

None of the part

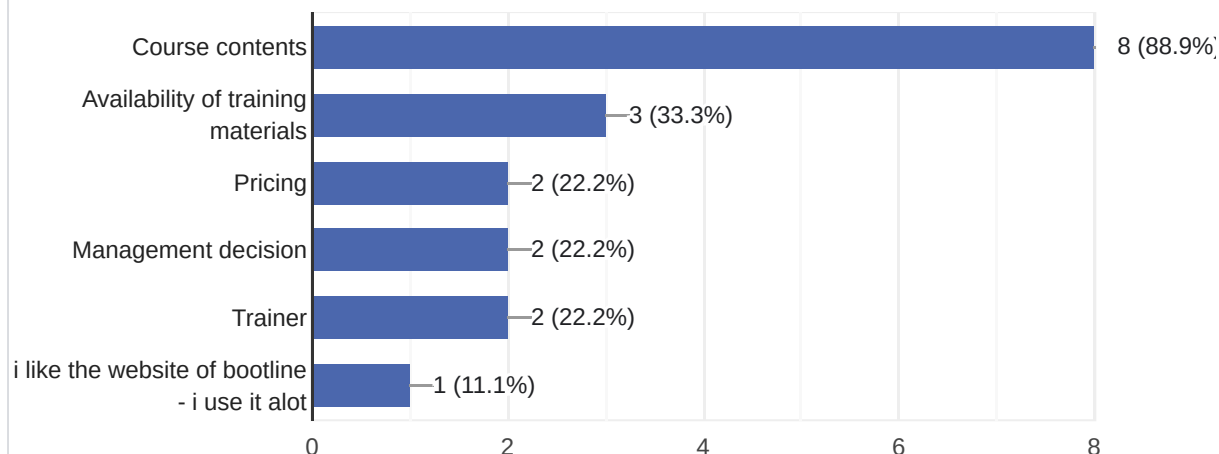

No, I think the course is great overall.

## What reasons prompted you to choose a Bootlin course?

## Comments

1 response

I would like to thank the instructor for providing such an excellent course. I have learned a lot and benefited greatly from it.

## Further training needs?

2 responses

No. For now

None at the moment.
