Great course, but would have been more impactful if each of us had our own HW setups

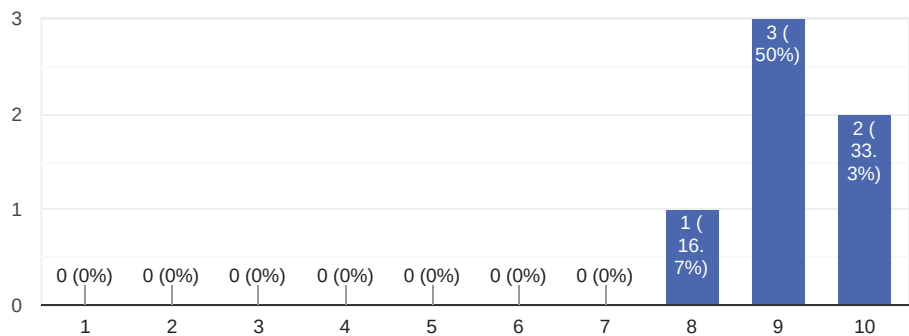

Good course

The entire course very helpful and insightful. Very beginner friendly.

## How useful were the lectures?

Instructor know well about topics

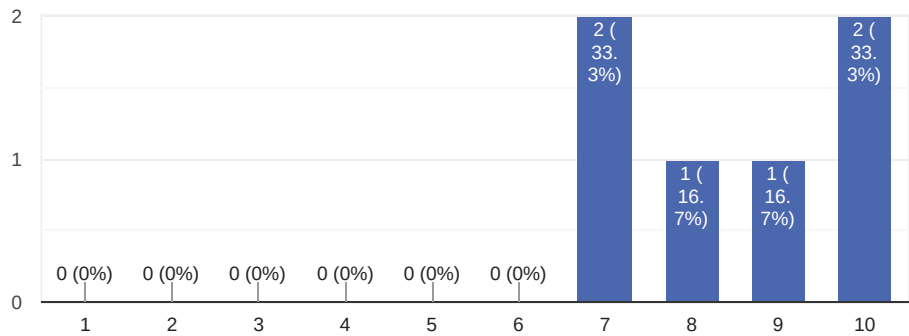

The slides were very useful and easy to follow. However, I did wish that there was a more in-depth document that explains the material further - not only for future reference but also to help someone who learns or digests information by reading and listening (multimodal learners).

How useful were the practical labs?

Labs is really fascinating, and enjoyable

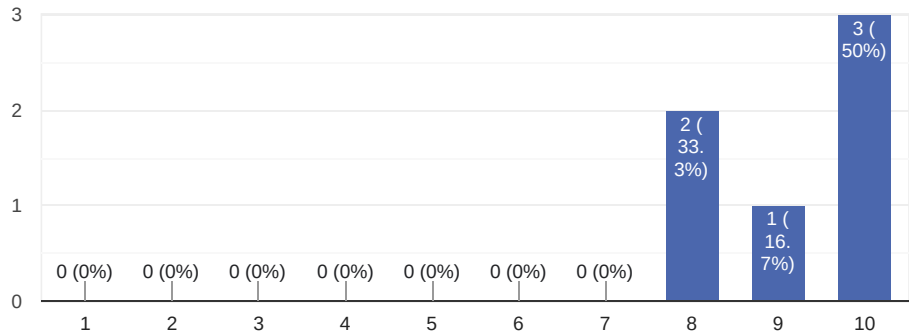

The labs complemented the theoretical knowledge learnt in the slides. I think it helped understand the material when the instructor would talk about a concept and we would do the corresponding lab right away.

Excellent labs with a lot of information and encouragement to solve the material. Suggestion: There is intentional missing information in the labs to make sure that the student understands the material. However, these labs are used as references for understanding the material, and the thought process for completing these labs need to be part of the lab solutions, otherwise a lot of context is lost.

How would you rate the overall organization of the course?

Know well the topics

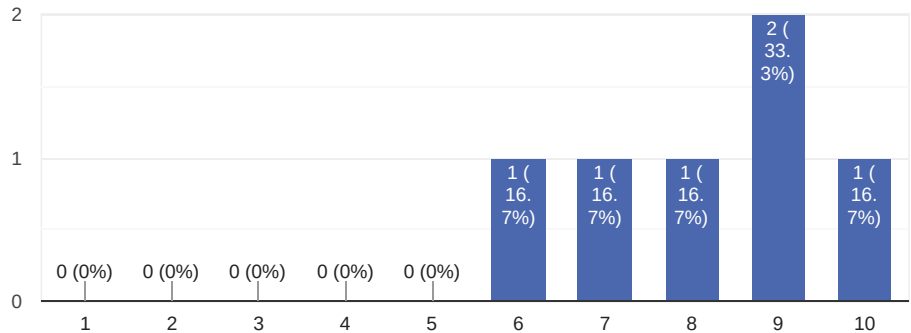

The trainer was knowledgeable and helpful, answered all of our questions (regardless of how many).

J  r  mie Dautheribes is an excellent trainer with a lot of knowledge about the material. He was an excellent resource during the week in clarifying any confusion and helping us better understand Yocto build system.

How did the course meet your learning objectives?

What part(s) of the course did you like most?

3 responses

The assignments did not give every step but just enough. Which was good

Labs

I think the labs were the most interesting part of the course. It was engaging and allowed me to independently solve my bugs, which helped me gain a better understanding.

What part(s) of the course did you like least?

2 responses

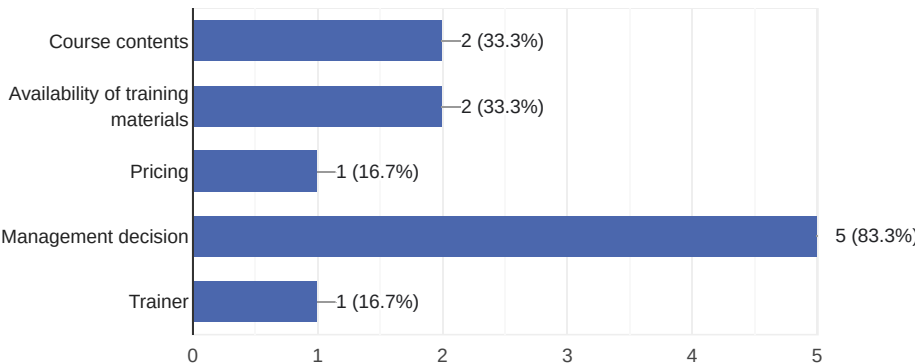

License

I think there were moments where it felt lecture-heavy or the tools introduced felt like a nice-to-know but a few examples of how it could have been used in practice would have been really helpful to understand its usage

What reasons prompted you to choose a Bootlin course?

Further training needs?

1 response

Embedded AI; a workshop or a hands-on course which walks you through building your own custom Yocto-based OS (more close to real-life practice than just a lab with installing ninvaders for instance)
