It was an online training so the labs had to be done in the afternoon. I think that is what is missing from the online training is 1 on 1 interaction doing the labs.

The content of the course was very interesting and will be very helpful for when I need to do some debugging on a linux system.

Very thorough presentation covering the topic.

How useful were the lectures?

Slides were excellent and are going to be useful if I need to look back at the content.

Trainer was very knowledgeable and able to answer questions.

How useful were the practical demos?

I really enjoyed going through the labs with the instructor and then going through again on my own time to fully understand the content of the lab.

Good basic examples on how to use the tools presented in the lectures. Helpful to understand how to interact with the target system.

How would you rate the overall organization of the course?

It progressed from basic background and easy to implement information to more advanced and complicated topics. I like this method of organization.

How would you rate the trainer?

Needed to raise the awareness of debugging tools in linux for my team. It did exactly that.

What part(s) of the course did you like most?

2 responses

all of the debugging examples.

Finding application issues and profiling performance.

What part(s) of the course did you like least?

2 responses

not having 1 on 1 lab time

Kernel debugging but only because it is not an urgent need for me.

What reasons prompted you to choose a Bootlin course?
