It was a very interesting training session, though a bit fast-paced for me, but it went well. After taking the quiz, I realize I need to go over certain points again. I wasn't able to practice on the target, but I hope to do so soon.

Complete course, very information dense. Fit for the avid learner, very dense!

Les slides étaient très claires, les labs étaient très pertinents et bien expliqués, et Jérémie a été excellent !

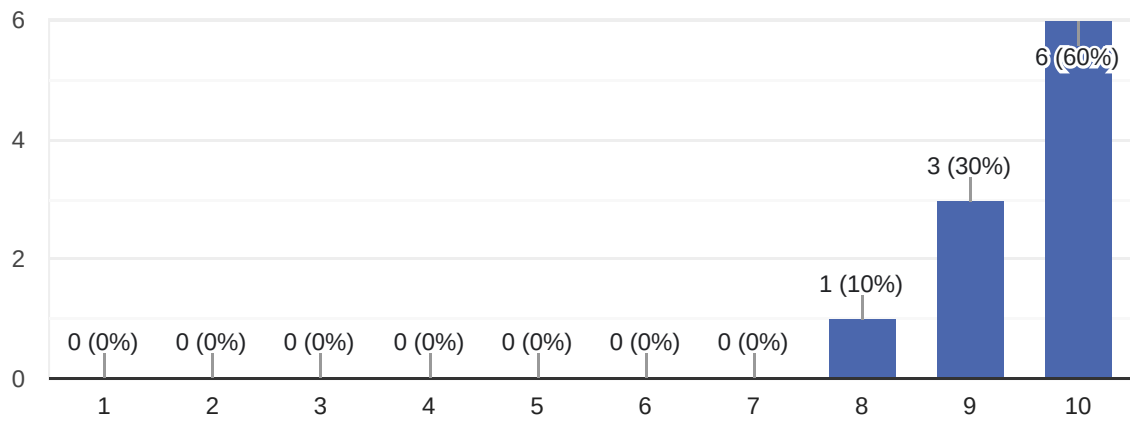

Very good introduction to ELD with great learning curve

Course covers a lot of good content and I feel like I have a good foundation to contribute to embedded linux projects

How useful were the lectures?

There's a lot of information to take in, but it will sink in with practice, and with the help of the labs

How useful were the practical demos?

Labs were very useful but it would have been better if it was easier for trainees (online) to do the labs also (maybe through cloud env?)

This is very useful for applying knowledge in a logical, step-by-step lab format, but for me, it remains theoretical until I can apply it to a target system; I've seen it on the host side using an Ubuntu VM.

I'd say those are even more important than the lectures as they demonstrate the real life usage of the introduced concepts. Time could maybe be saved by preparing the builds for the toolchain or Buildroot labs (CCache, or use buidl4?)

A history of everything typed in the terminals (even the misqueues if there were any) would be very helpful, the font was really small in some cases and when multiple terminals were being used I missed some things.

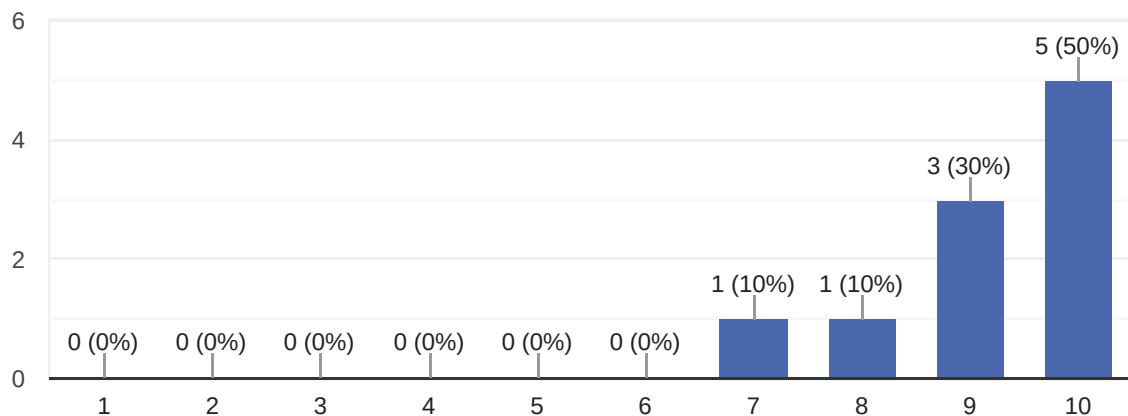

Extremely useful for practical learners when doing in parallel / redoing at home

Doing the practical demos cemented what we learn during the lectures, I understand why its optional as not everyone would have access to the hardware but I do feel like I learn more by doing them myself

How would you rate the overall organization of the course?

Time management with regard to the number of course days should be carefully considered. It was clear from the very beginning that the eighth day would be necessary, and this should have been communicated before the start.

Above all, when planning the schedule, care should be taken to ensure that no day falls on a national holiday (Good Friday) in various parts of the world.

How would you rate the trainer?

Hey Jeremie, I just wanted to say a big thank you! Your lessons are not only super helpful but also really enjoyable. I always find your explanations so clear and easy to follow. I've learned a lot from you, and I'm truly grateful for that. Thanks again for everything!

A highly dedicated trainer who explains things clearly, goes through demonstrations thoroughly, listens carefully, and answers all questions.

Jérémie is a great teacher, I really enjoyed following the course with him. He uses a relaxed tone yet delivers precise information. I would perhaps suggest skipping over some of the bulletpoints in slides to gain time and go straight to the point.

Ca semble très difficile de faire un training à distance, merci à Jérémie d'avoir été aussi disponible pour répondre à toutes les questions, et pour avoir été aussi clair et pertinent sur ces deux semaines de training.

Very knowledgeable, able to answer questions in more than one way, courteous, professional.

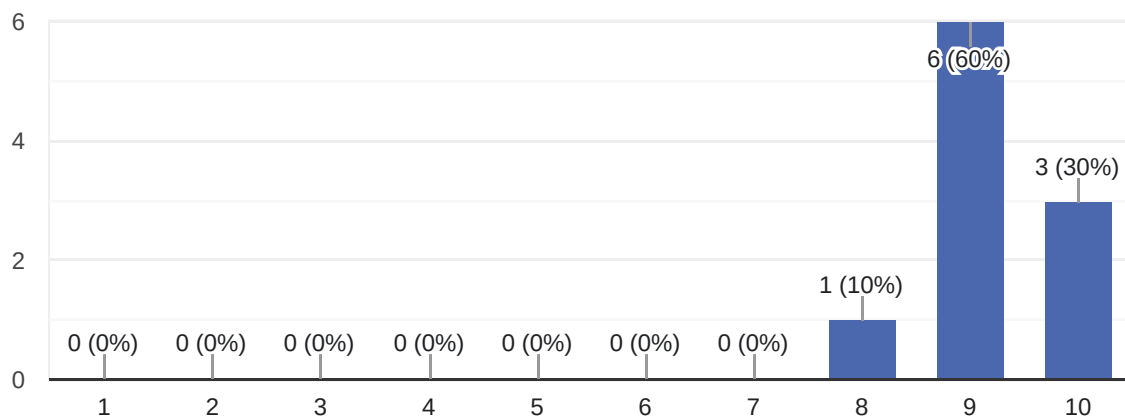

Very nice and helpful

Really liked how Jérémie took the time to answer our questions, he explained the content really well

How did the course meet your learning objectives?

Cover all points of the training objectives, It's a great way to get started with Linux architecture and build that essential foundation, but of course we're still curious about the possibilities offered by tools like Yocto, which was introduced during the training and which I've started looking into.

What part(s) of the course did you like most?

7 responses

All of it except license part

Live Demos

They're all important, but since I come from an application development background, I have a slight preference for "Be able to develop and debug applications on an embedded Linux system."

Probablement toute la partie sur la compréhension du device-tree, puis du filesystem et la mise en place d'adaptations pour rajouter des fonctionnalités et des drivers.

Not one part per se, rather how the lectures tied into/ led into the labs.

Practical Labs

The content about cross compilation, busybox, compiling external projects

What part(s) of the course did you like least?

6 responses

License

Going through lengthy command sections and arguments without live demonstration

none

Difficile à dire, j'ai un peu décroché lors de la cross-compilation de plusieurs libraries, mais dans l'ensemble tout était pertinent.

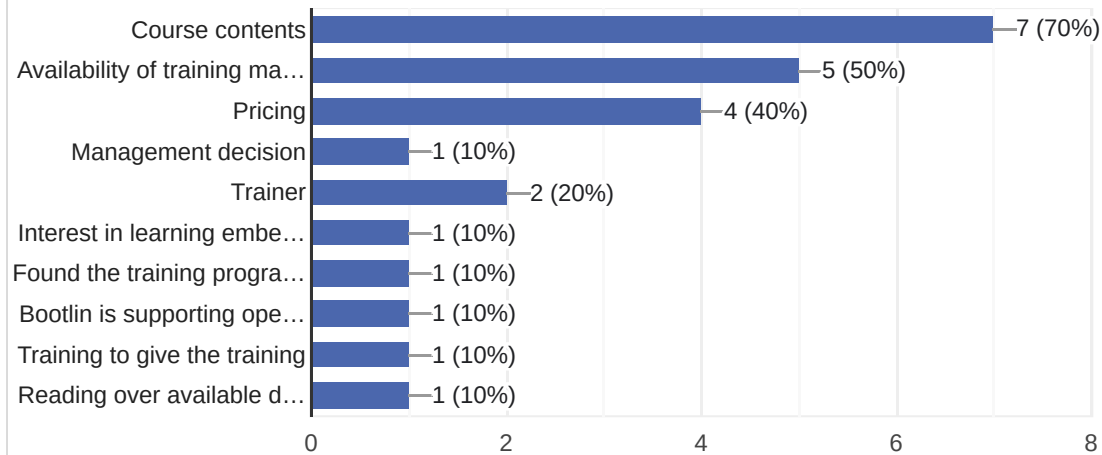

Couldn't do the labs at the same time as instructor/ during class time.

The content about licensing. I understand its importance and it should still be part of the course, its just not as interesting as the rest of the content

What reasons prompted you to choose a Bootlin course?

drew.mccutchan@collins.com

Thank you for this comprehensive training, which will help us develop on Linux.

Je suis certain de recommander un training avec Bootlin, pour une fois j'ai réellement l'impression d'avoir appris des choses réutilisables et utiles, merci !

I think the dayspan of the course should be spread apart more so there will be more time to redo practical labs and reread the slides between sessions during normal working days

Really good course, I learnt a lot

Further training needs?

3 responses

- FPGA programming
- Drones

As I said before, perhaps Yocto

Wish the beagleplay would have been covered instead of STM ...
