The practical demos are essentials (for me) to understand the course

Proper guidelines

How would you rate the overall organization of the course?

Easy. The matrix server was easy to join with the doc to explain. We got enough pause in the course which was nice. I liked the half-day instead of full day training

I would have liked the lectures to be a bit more spread out, add 1 or 2 days so it can be taken a bit slower. Sometimes it felt a bit rushed.

How would you rate the trainer?

What part(s) of the course did you like most?

4 responses

Even though multiple tools are available to get the final build(Yocto, build root etc), internal components were demonstrated like configuring cross-tool, individual binary compilations and installation.

The practical labs

The labs

Everything from the start up until filesystems + Buildroot. Those are the parts I had the least knowledge about and I think is also more difficult to get into without a proper training.

What part(s) of the course did you like least?

2 responses

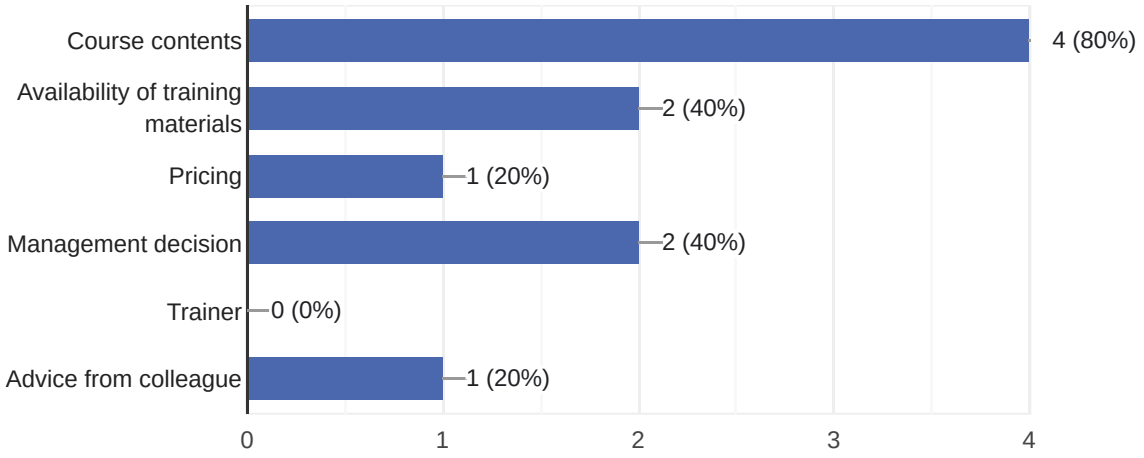

The licenses for me it was hard, i would've liked more graph / diagrams in this part

Licensing and user space application development. I do understand why it's part of the course, it goes over the whole stack. Personally I would have liked to spend more time on the earlier parts instead.

What reasons prompted you to choose a Bootlin course?
