I think the lectures were especially helpful when they tied a technical fact with something that people could see or have experience with, like how in the first lecture Jeremie mentioned that the UEFI is similar to the BIOS, in the sense that it is always connected to devices like the screen, which is why you can always see a BSOD. It always helps me when I can pair a technical fact with something practical because the fact then makes more sense and I don't have to rely on memorization.

Very good. Right amount of info: not too daunting and complicated, but not too broad and general

How useful were the practical labs?

My favorite part. Helped reinforce the lecture information each morning/afternoon

How would you rate the overall organization of the course?

I would prefer for the labs to be at the end of class. There was some awkard wait time while waiting for other groups to finish the lab to get to the last slides, but overall the organization was good.

Sometimes there would be lectures after a lab so if there were groups taking a while, it would cause the training to run late for the day. But otherwise good

How would you rate the trainer?

The instructor was extremely knowledgeable, and answered all of the questions during the slides and labs. I learned a great deal and was extremely impressed with the quality and information provided by the instructor. This course made complicated topics very easy to understand and I will be able to directly use what I learned in my day to day job. I will recommend this instructor and this course in the future to colleagues and I hope the training is offered again in the future. Overall this course is one of the best and most informative training courses I have completed.

Went in knowing very little and came out with fundamental understanding of all the different parts of the embedded Linux system architecture/software stack

What part(s) of the course did you like most?

4 responses

The labs were quite helpful. I wish we had more time to go through the labs because my team liked to investigate everything, so sometimes we would run out of time to complete the labs

I liked the labs

Overall I liked the lab component the best as it provided an opportunity to apply what we talked about and a way to run through the concepts on physical hardware. The instructor was extremely helpful and monitored each group and was always available to assist when my group got stuck or had a question about the labs.

The hands on labs

What part(s) of the course did you like least?

2 responses

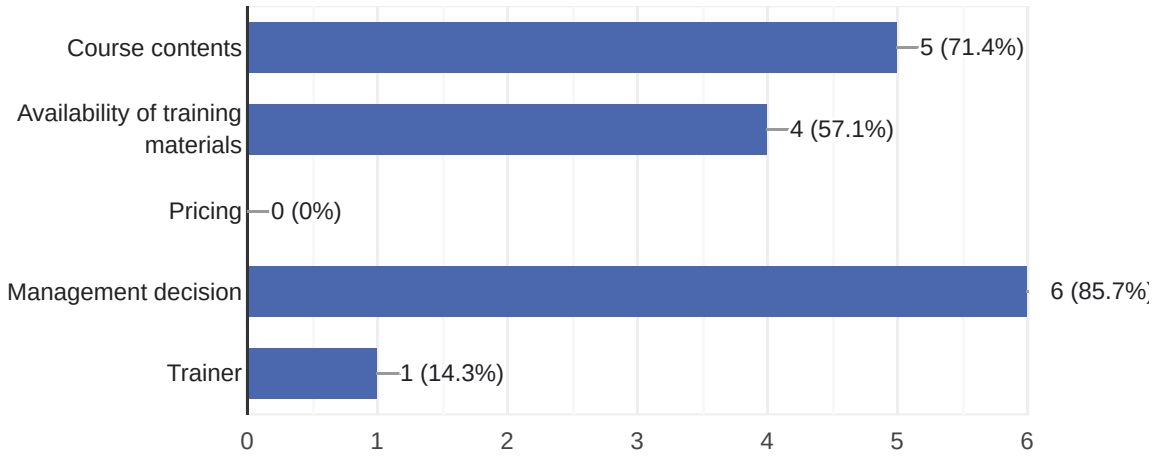

It was sometimes hard to determine if the project wasn't working properly because of hardware issues or software issues

The course sometimes ran late

What reasons prompted you to choose a Bootlin course?

Further training needs?

1 response

I would be interested in linux for robotics, embedded vision and perception systems, medical and wearable embedded systems, how to go from prototypes to production for connected devices, engineering entrepreneurship for embedded developers, and learning more about independent engineering consulting.
