1 response

Very useful, from the basics to advanced topics

How useful were the practical labs?

8 responses

Comments and suggestions

2 responses

They were useful but at some points the balance between the time of the labs and material wasn't well balanced, wasting a lot of time on some specific technicalities on the lab that might not be very important to the overall learning

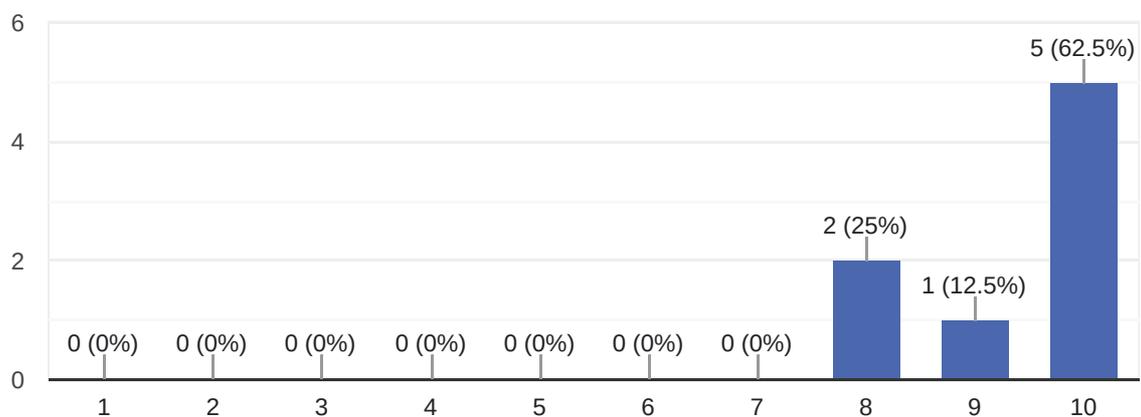

The DMA lab was a bit hard

Other than that there's sometimes a few lines of code that we're told to copy paste or are found in the lab's PDF. For these lines, I think it's better to hide the lines somehow unless we hover over them (like a spoiler tag).

How would you rate the overall organization of the course?

Comments and suggestions

3 responses

I think just a little less time on the labs (or maybe even more structured lab guides) - also quick review of the lab solutions might be beneficial.

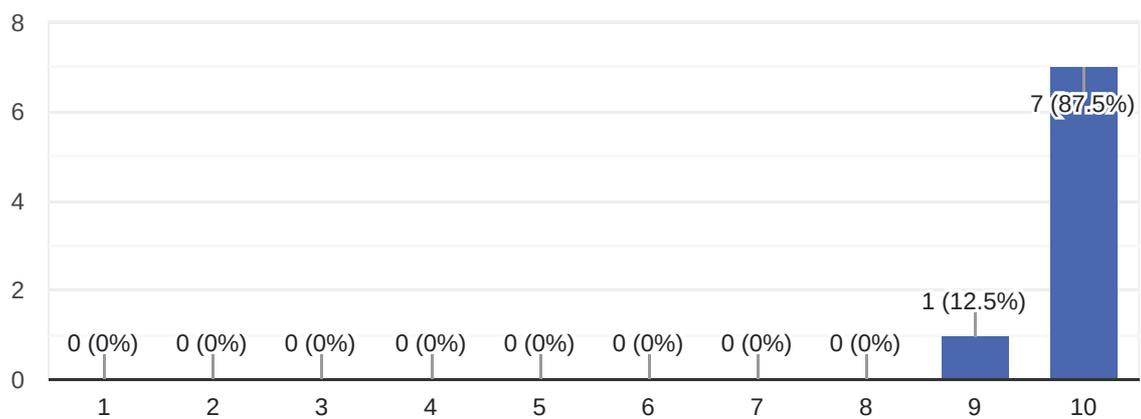

They needed a little more time to learn and understand.

Slides can be a little more organized but overall they're very good and clear

How would you rate the trainer?

Amazing!

I can say only good and warm words about Gregory, professional, experienced and full of patience

How did the course meet your learning objectives?

Comments and suggestions

1 response

more than I expected

What part(s) of the course did you like most?

4 responses

I like it started from the base to advanced topics

DMA +interrupts

The labs

the Labs

What part(s) of the course did you like least?

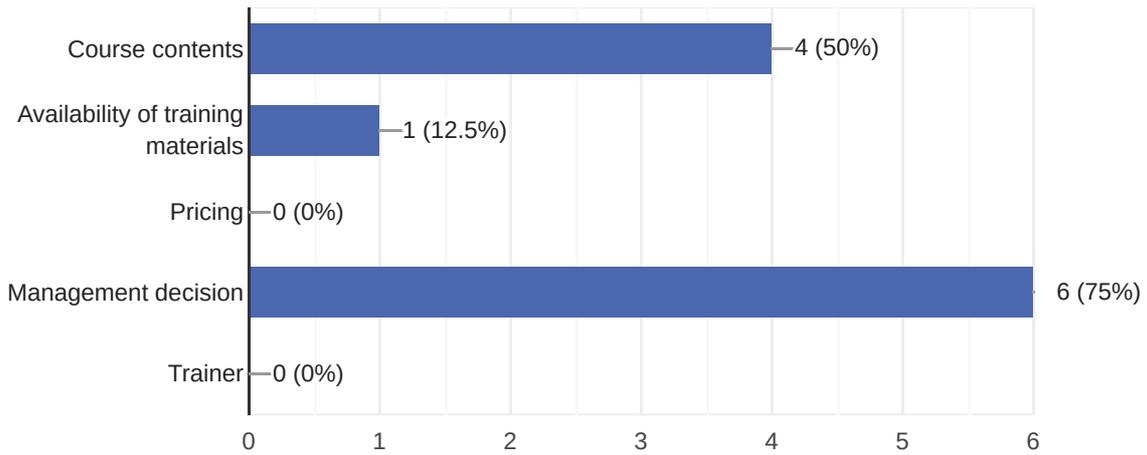

1 response

DTS Bindings - it's useful but not as useful as the other topics

What reasons prompted you to choose a Bootlin course?

As an entry-level engineer in the embedded field, I really enjoyed this course. I learned a lot - big thanks to Gregory :)

Further training needs?

2 responses

Would be nice to have further debug training onsite with Gregory Clement

Embedded Linux training
