The training is well organized and the topics mentioned are relevant. Maxime is very knowledgeable about Networking and he explains the topics very well.

How useful were the lectures?

To me, reproducing the labs is important to get a real understanding of how things work, and to have an example I understand to refer to when I need to apply what I've learned. The difficulty in obtaining an Espressobin board is a problem, but I know you're already aware of this and working on it!

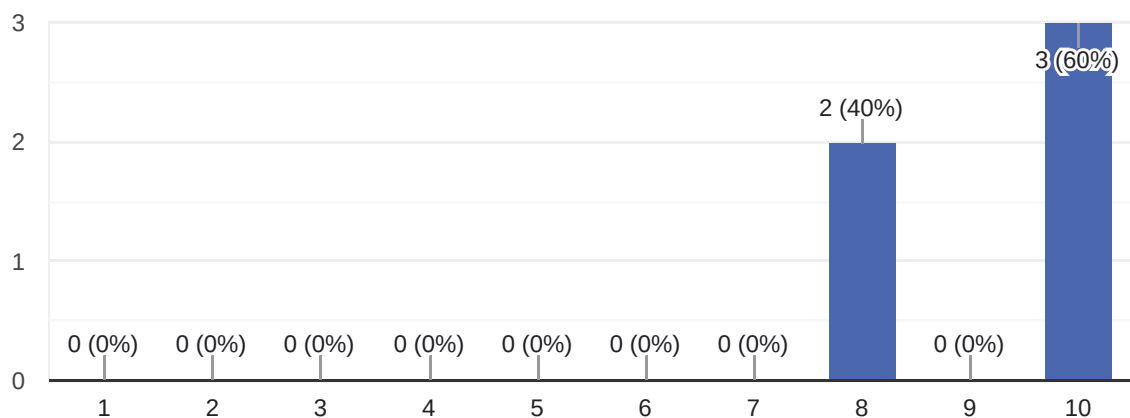

In my point of view, the best part of the training are the practical demos. There should be more of this.

I think the demos are not very useful when the audience is also not working the examples themselves.

How would you rate the overall organization of the course?

What part(s) of the course did you like most?

2 responses

The labs were my favorite. Being able to play with the hardware and deploy the drivers was great.

eBPF, Network Devies and Debugging

What part(s) of the course did you like least?

2 responses

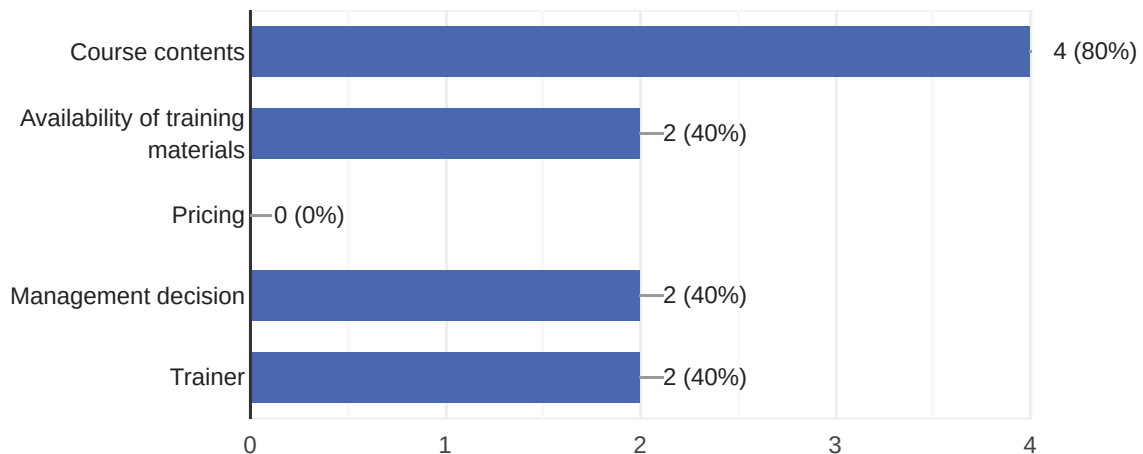

We didn't play enough with wireshark or tcpdump. It would have been great if the training include more labs or exercises for these topics.

Socket Buffers

What reasons prompted you to choose a Bootlin course?

Further training needs?

2 responses

I am interested in the Graphics stack training.

I have noticed that bootlin overlaps many trainings. Two interesting trainings in the same dates. I think bootlin could make a better job setting the dates.

Linux Debugging
